

# Tab Management Redesign

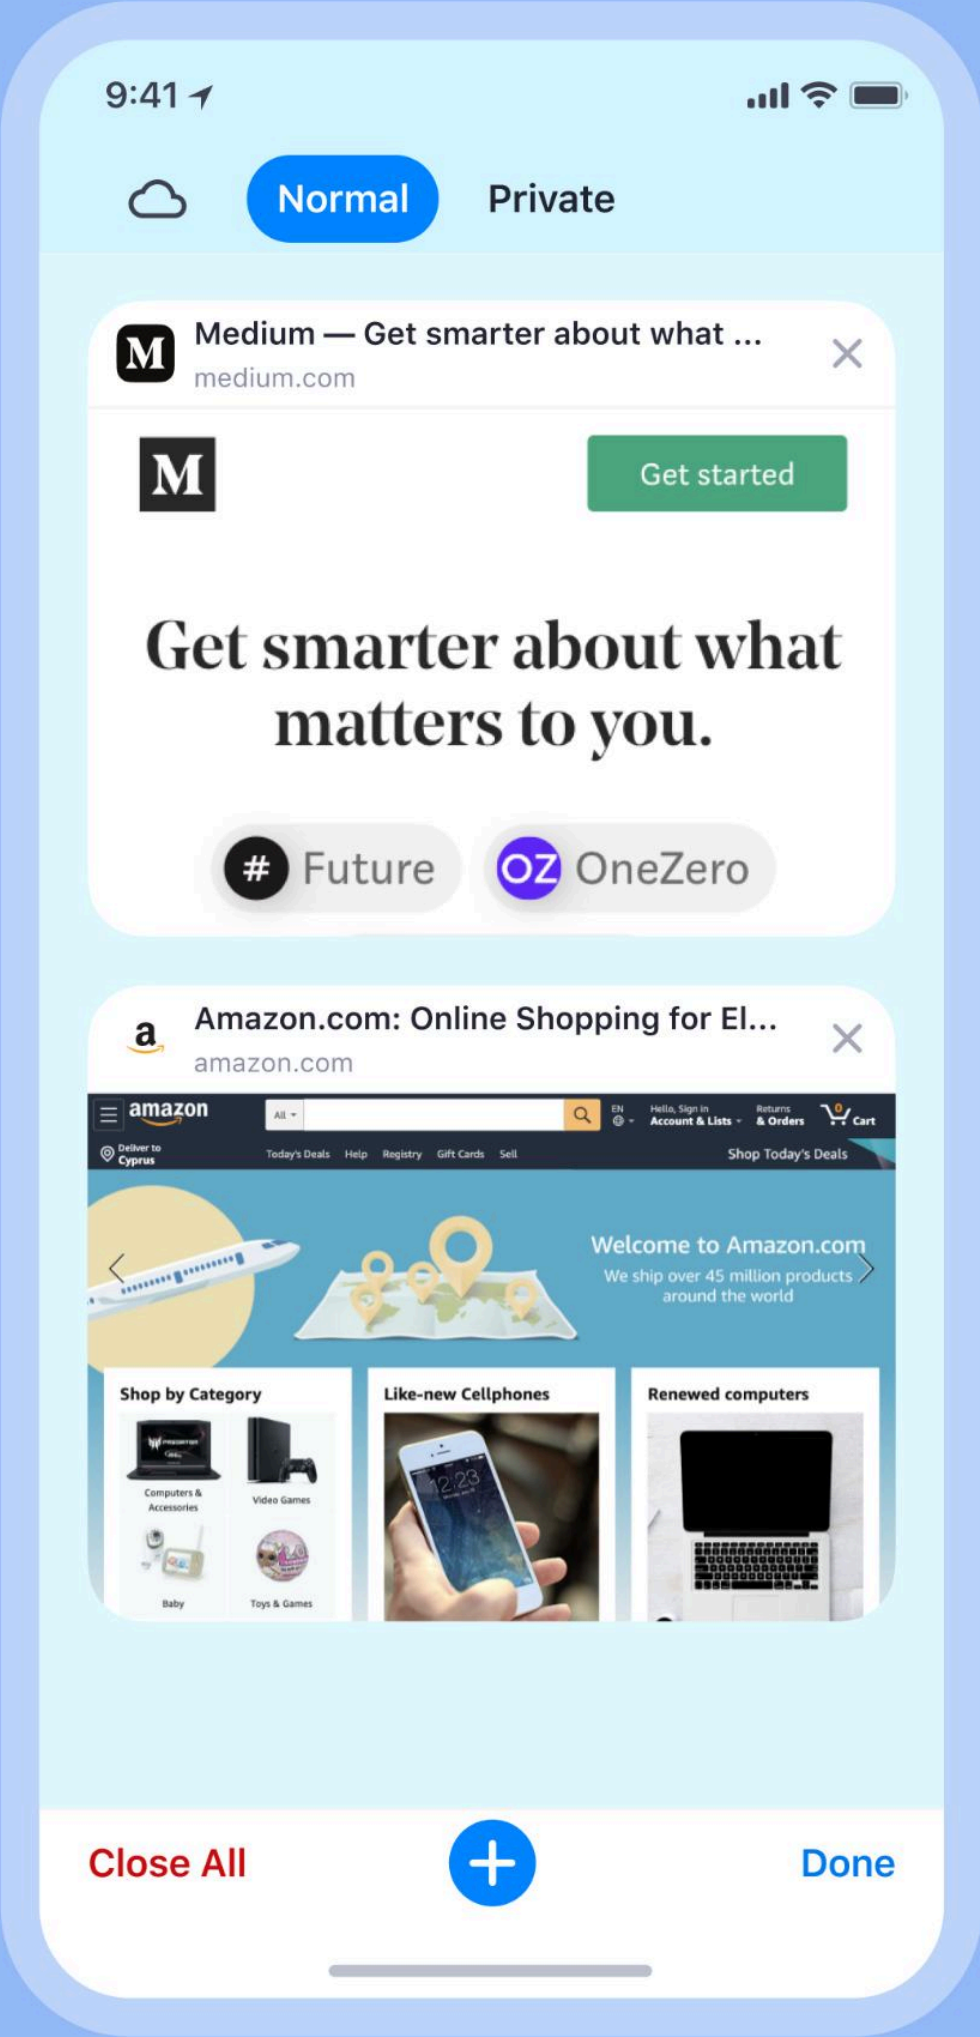

# Before and after

Before

Tabs too large

Outdated

Split UI

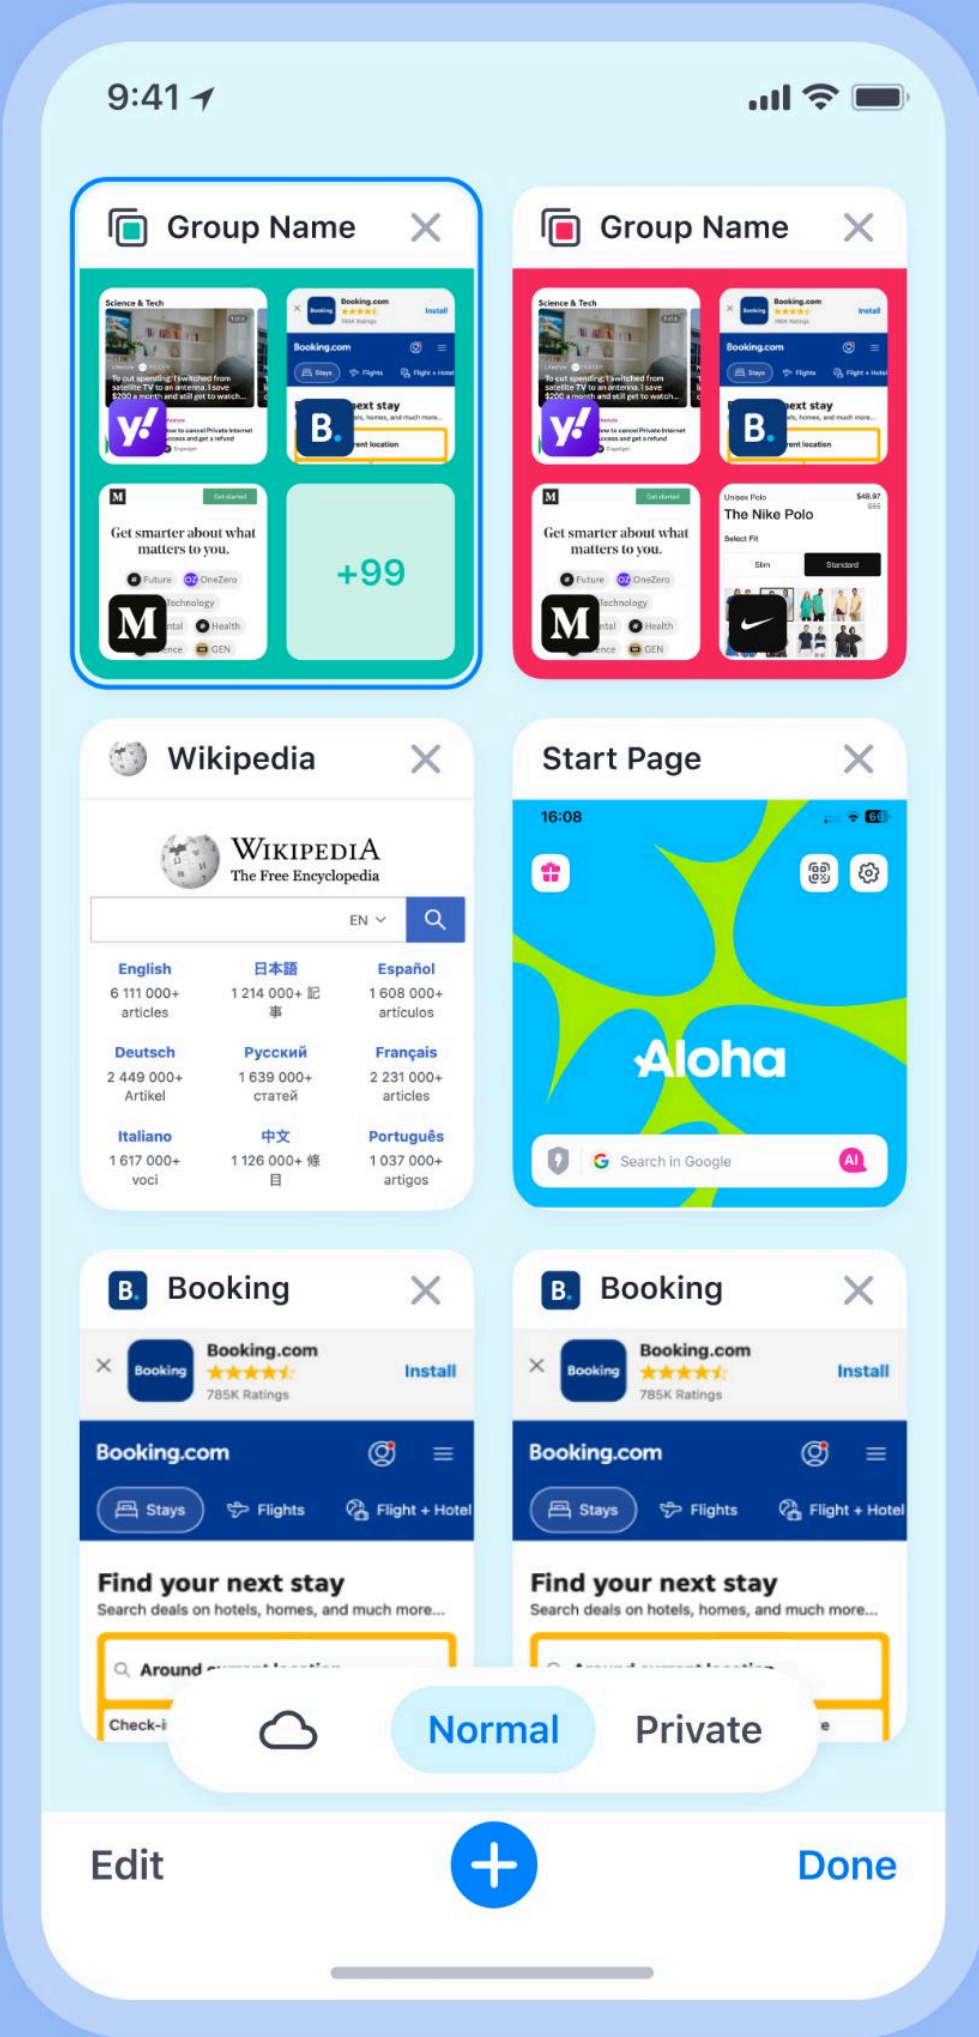

After

Grouping

Efficient Design

Convenient UI

# Problem space

## User Feedback

Users complaining that tabs are inconvenient to use

Users asking for features like tab grid and grouping

## Business Concerns

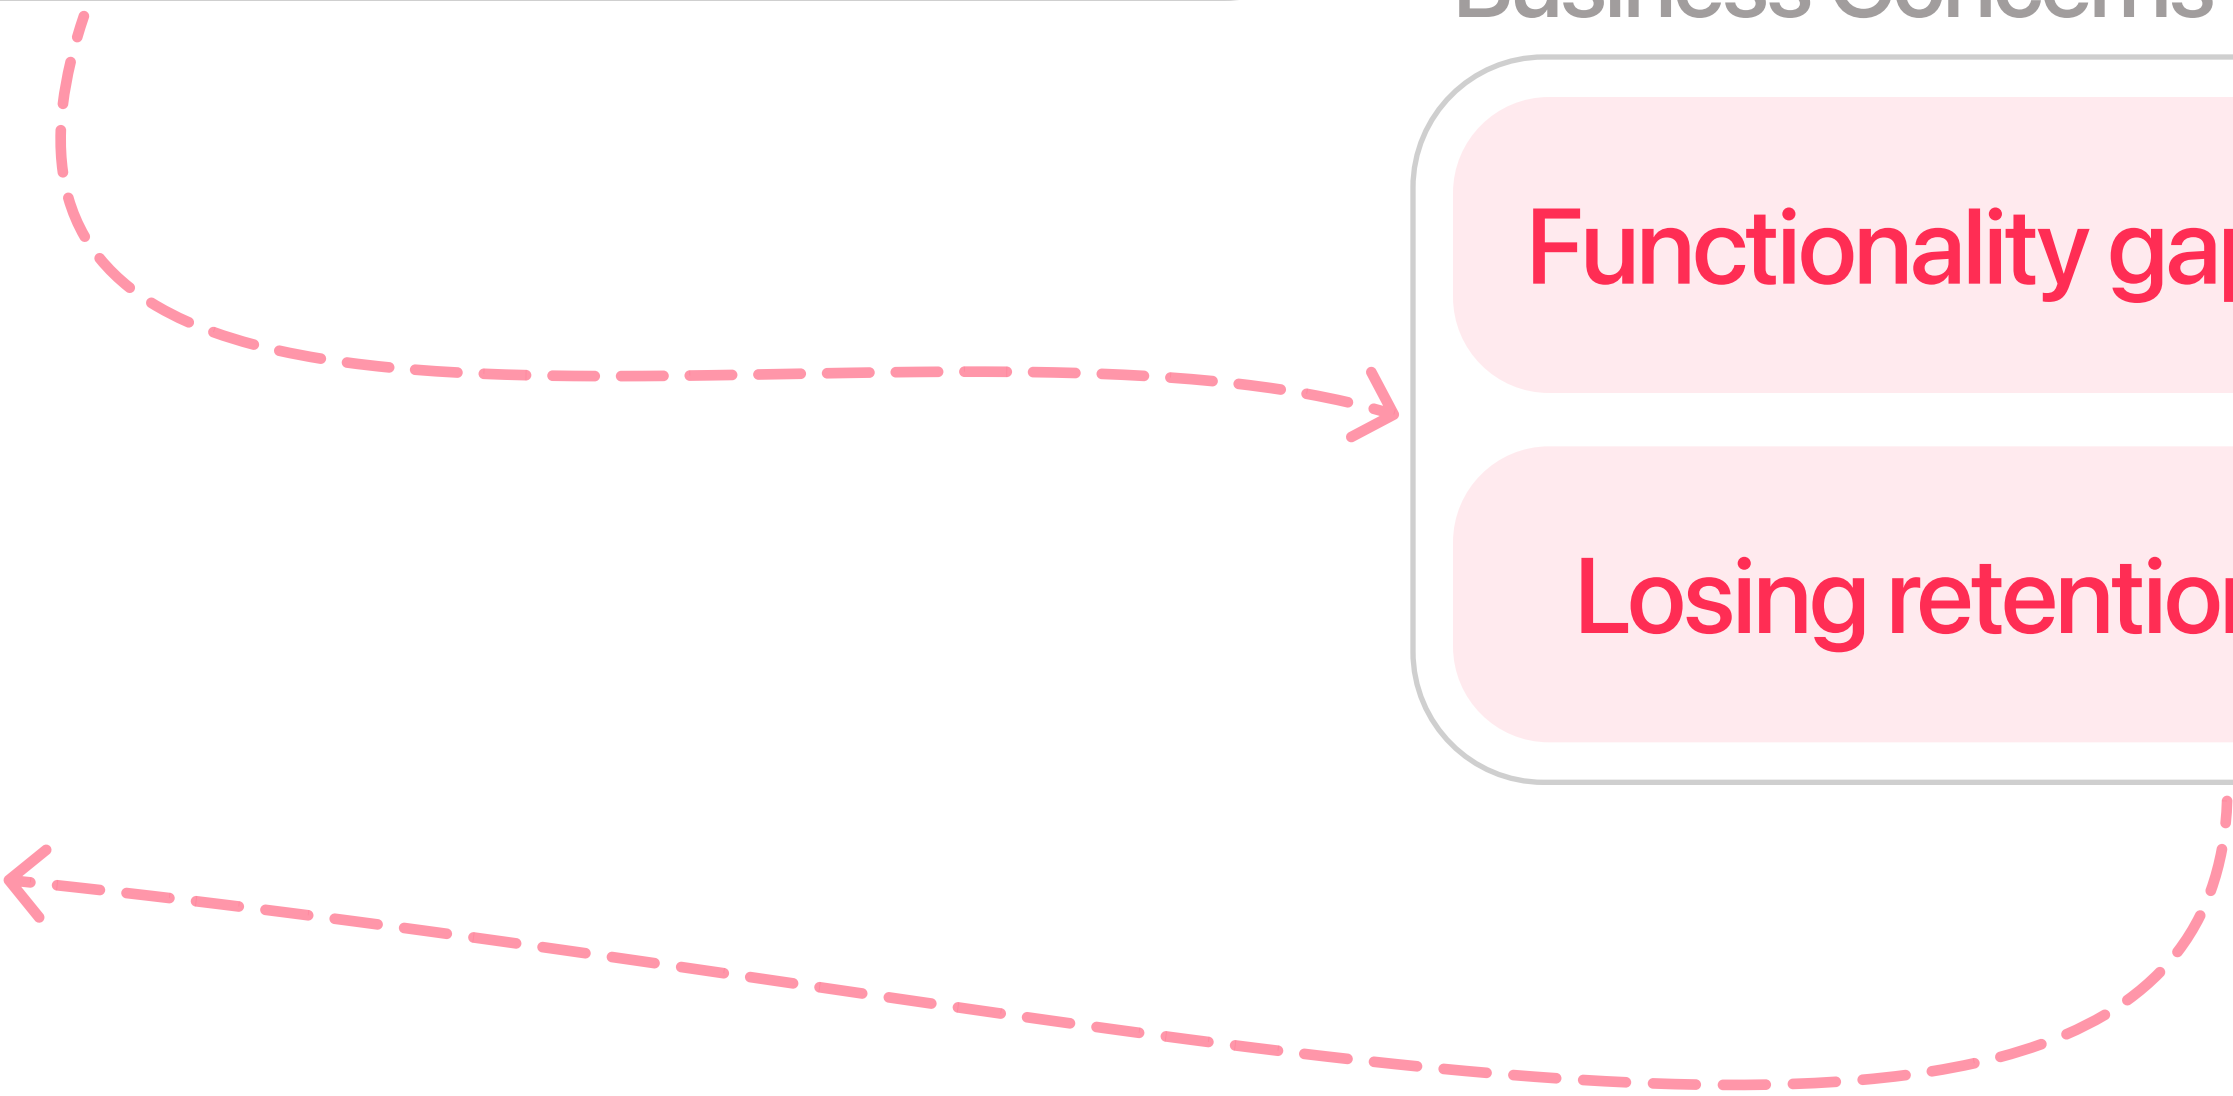

Functionality gap to competitors

Losing retention opportunities

## Design Concerns

Outdated UX patterns

Outdated UI

# Process

## Discovery

User feedback analysis

Usage analytics

Competitor research

## Design

Initial prototype

Aligning goals & strategy

Feature roadmap

Iterative design

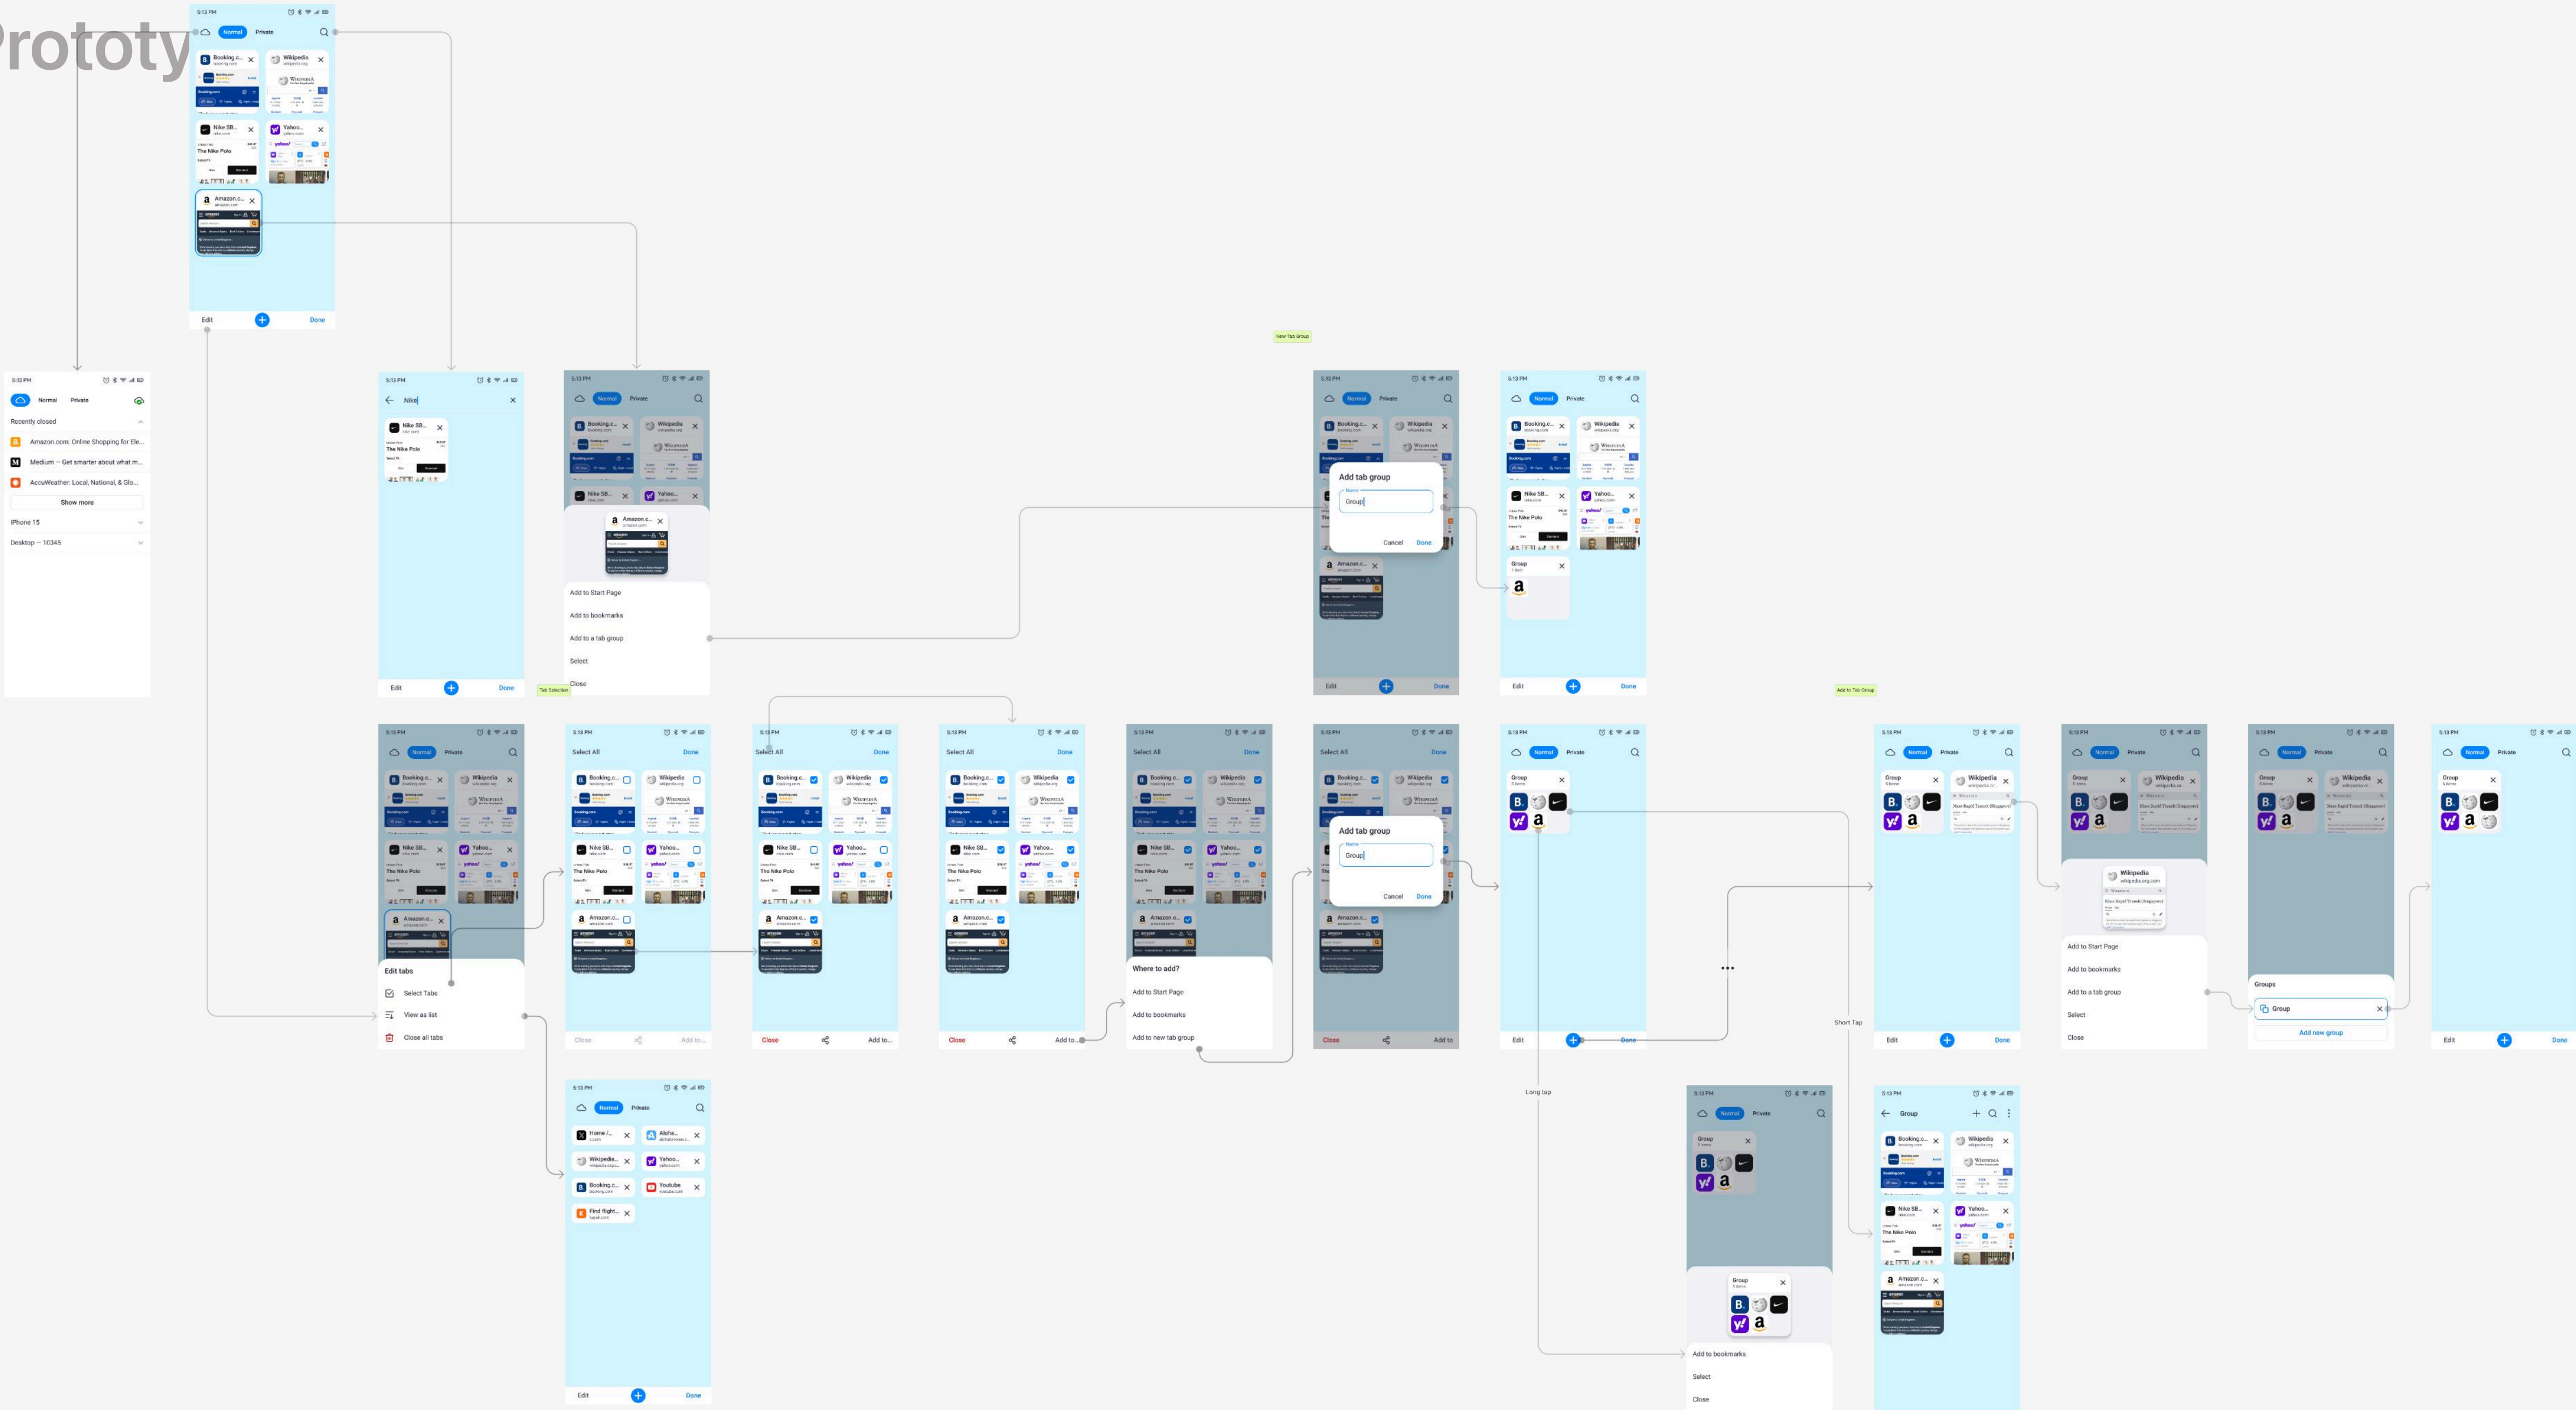

## Development

Aligning on development strategy

Working with platform and  
team constraints

# Prototy

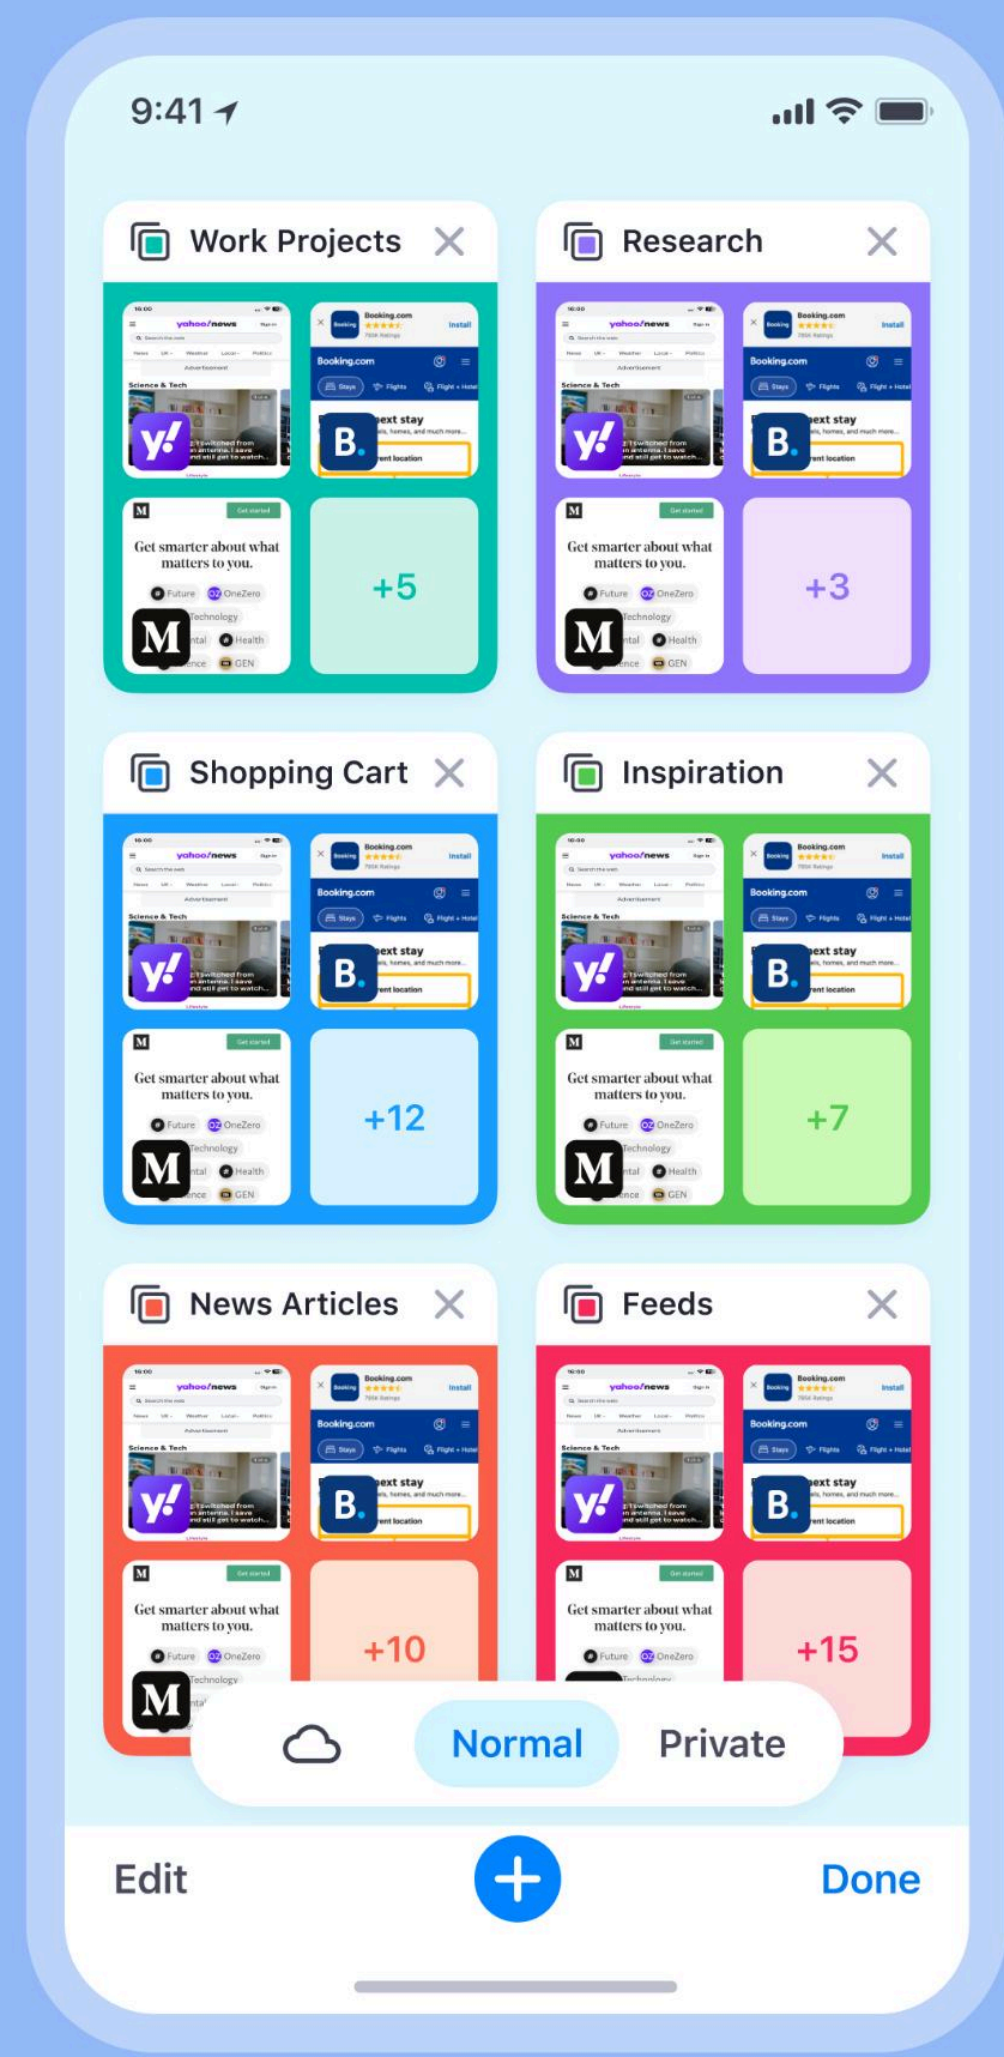

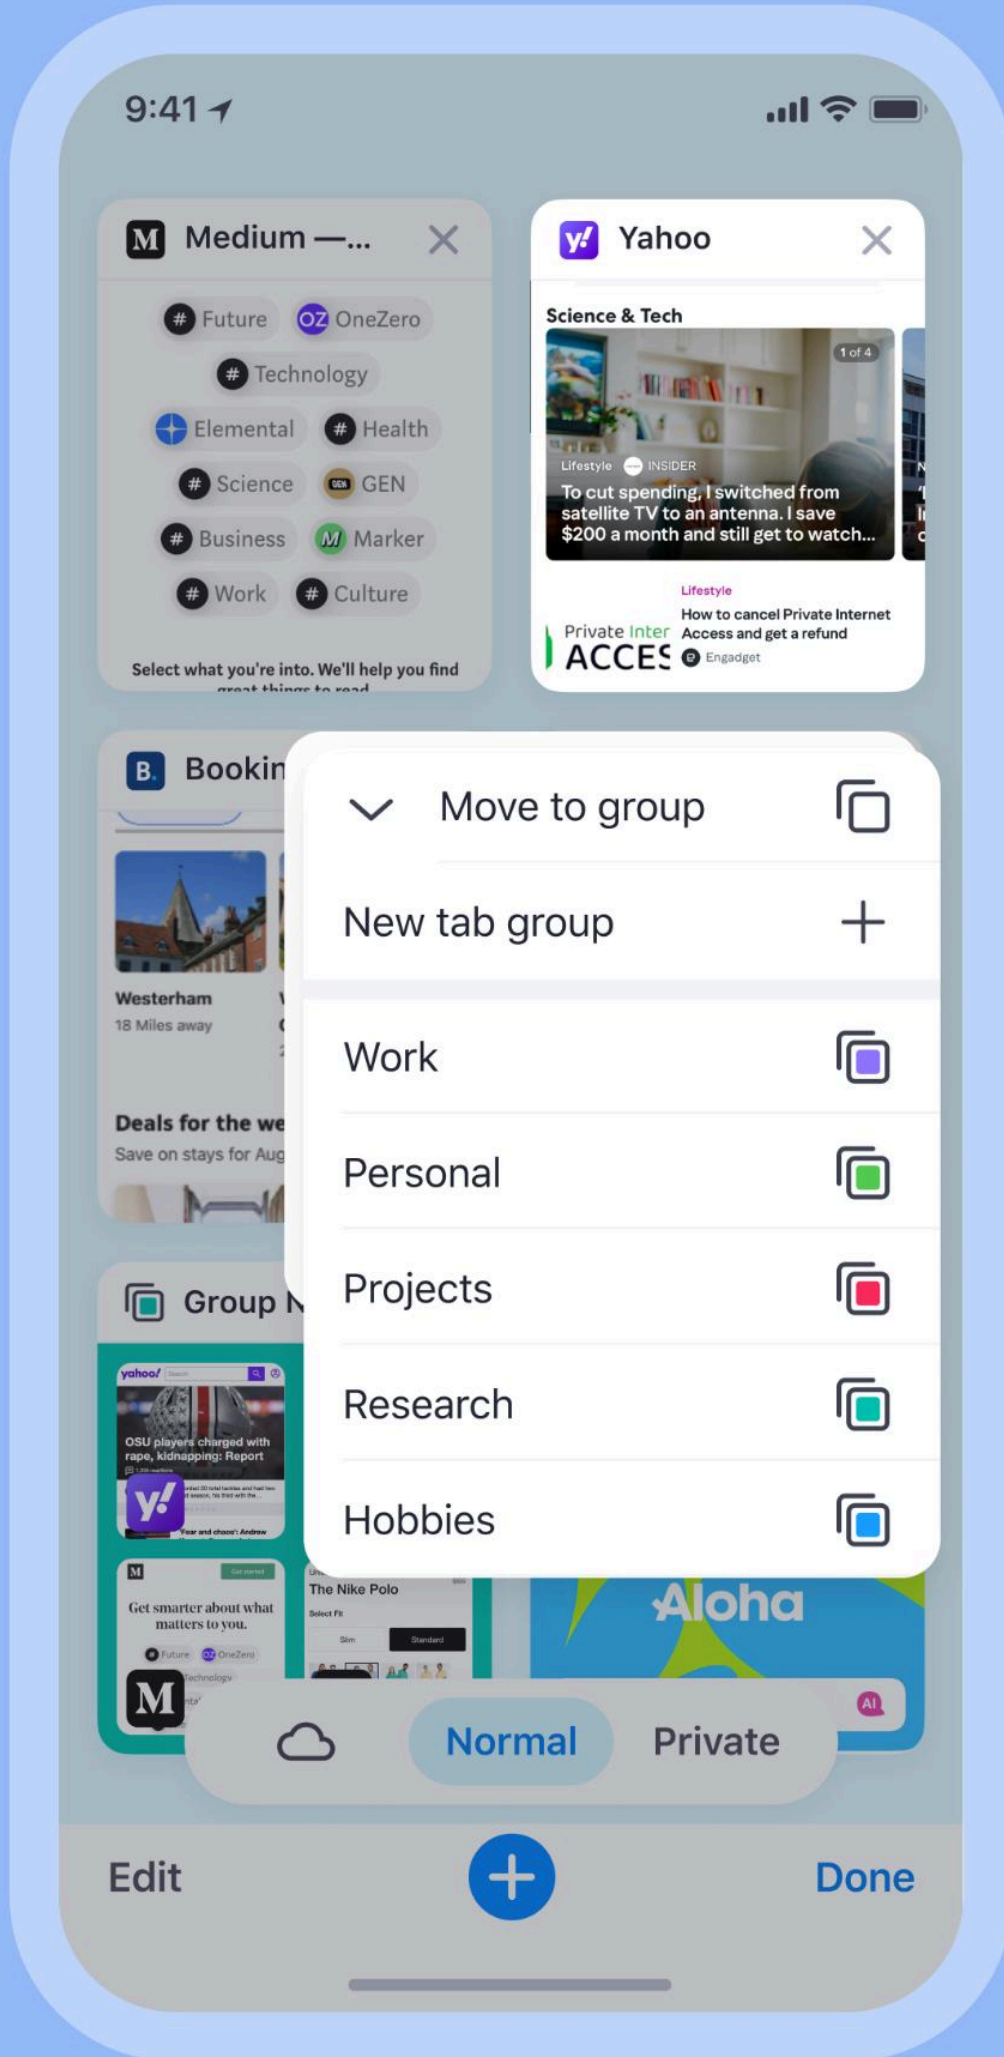

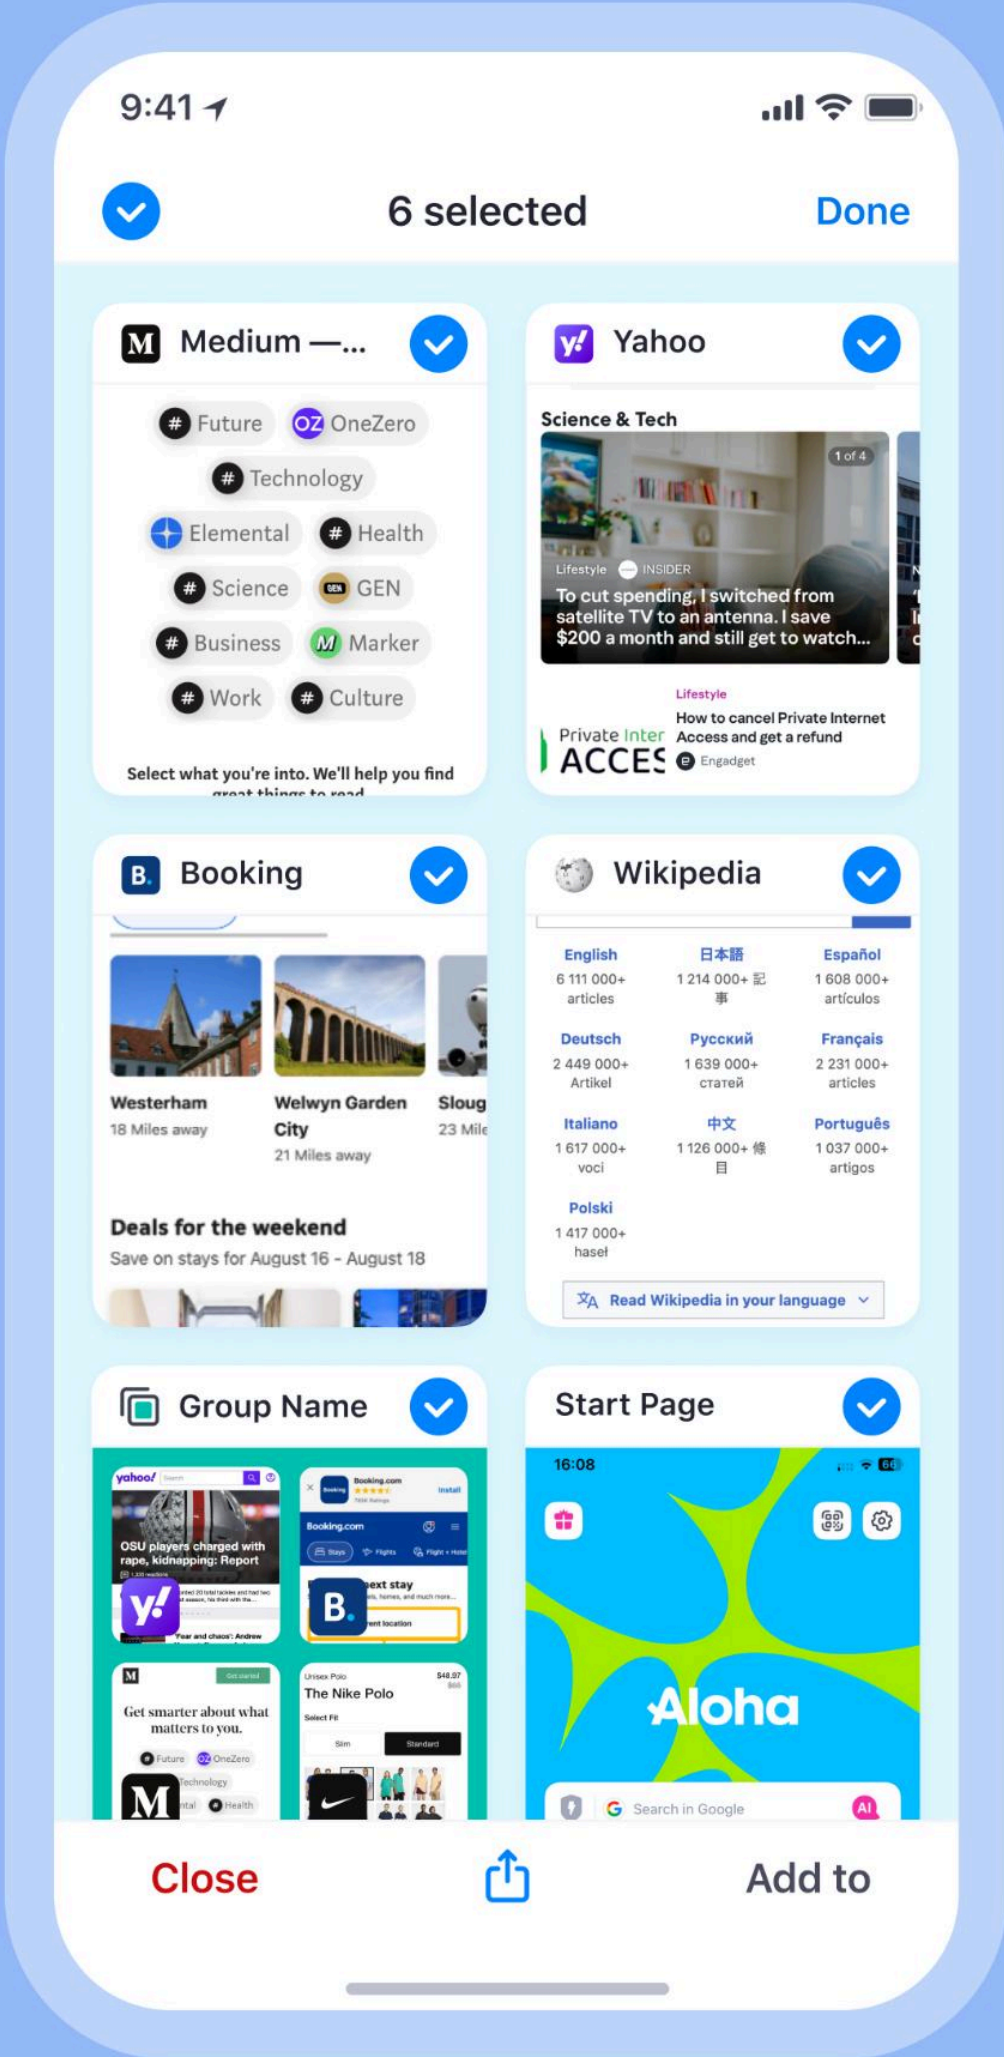

# Solution: Grouping

Grouping

Batch Grouping

Easy Menu

Customizable

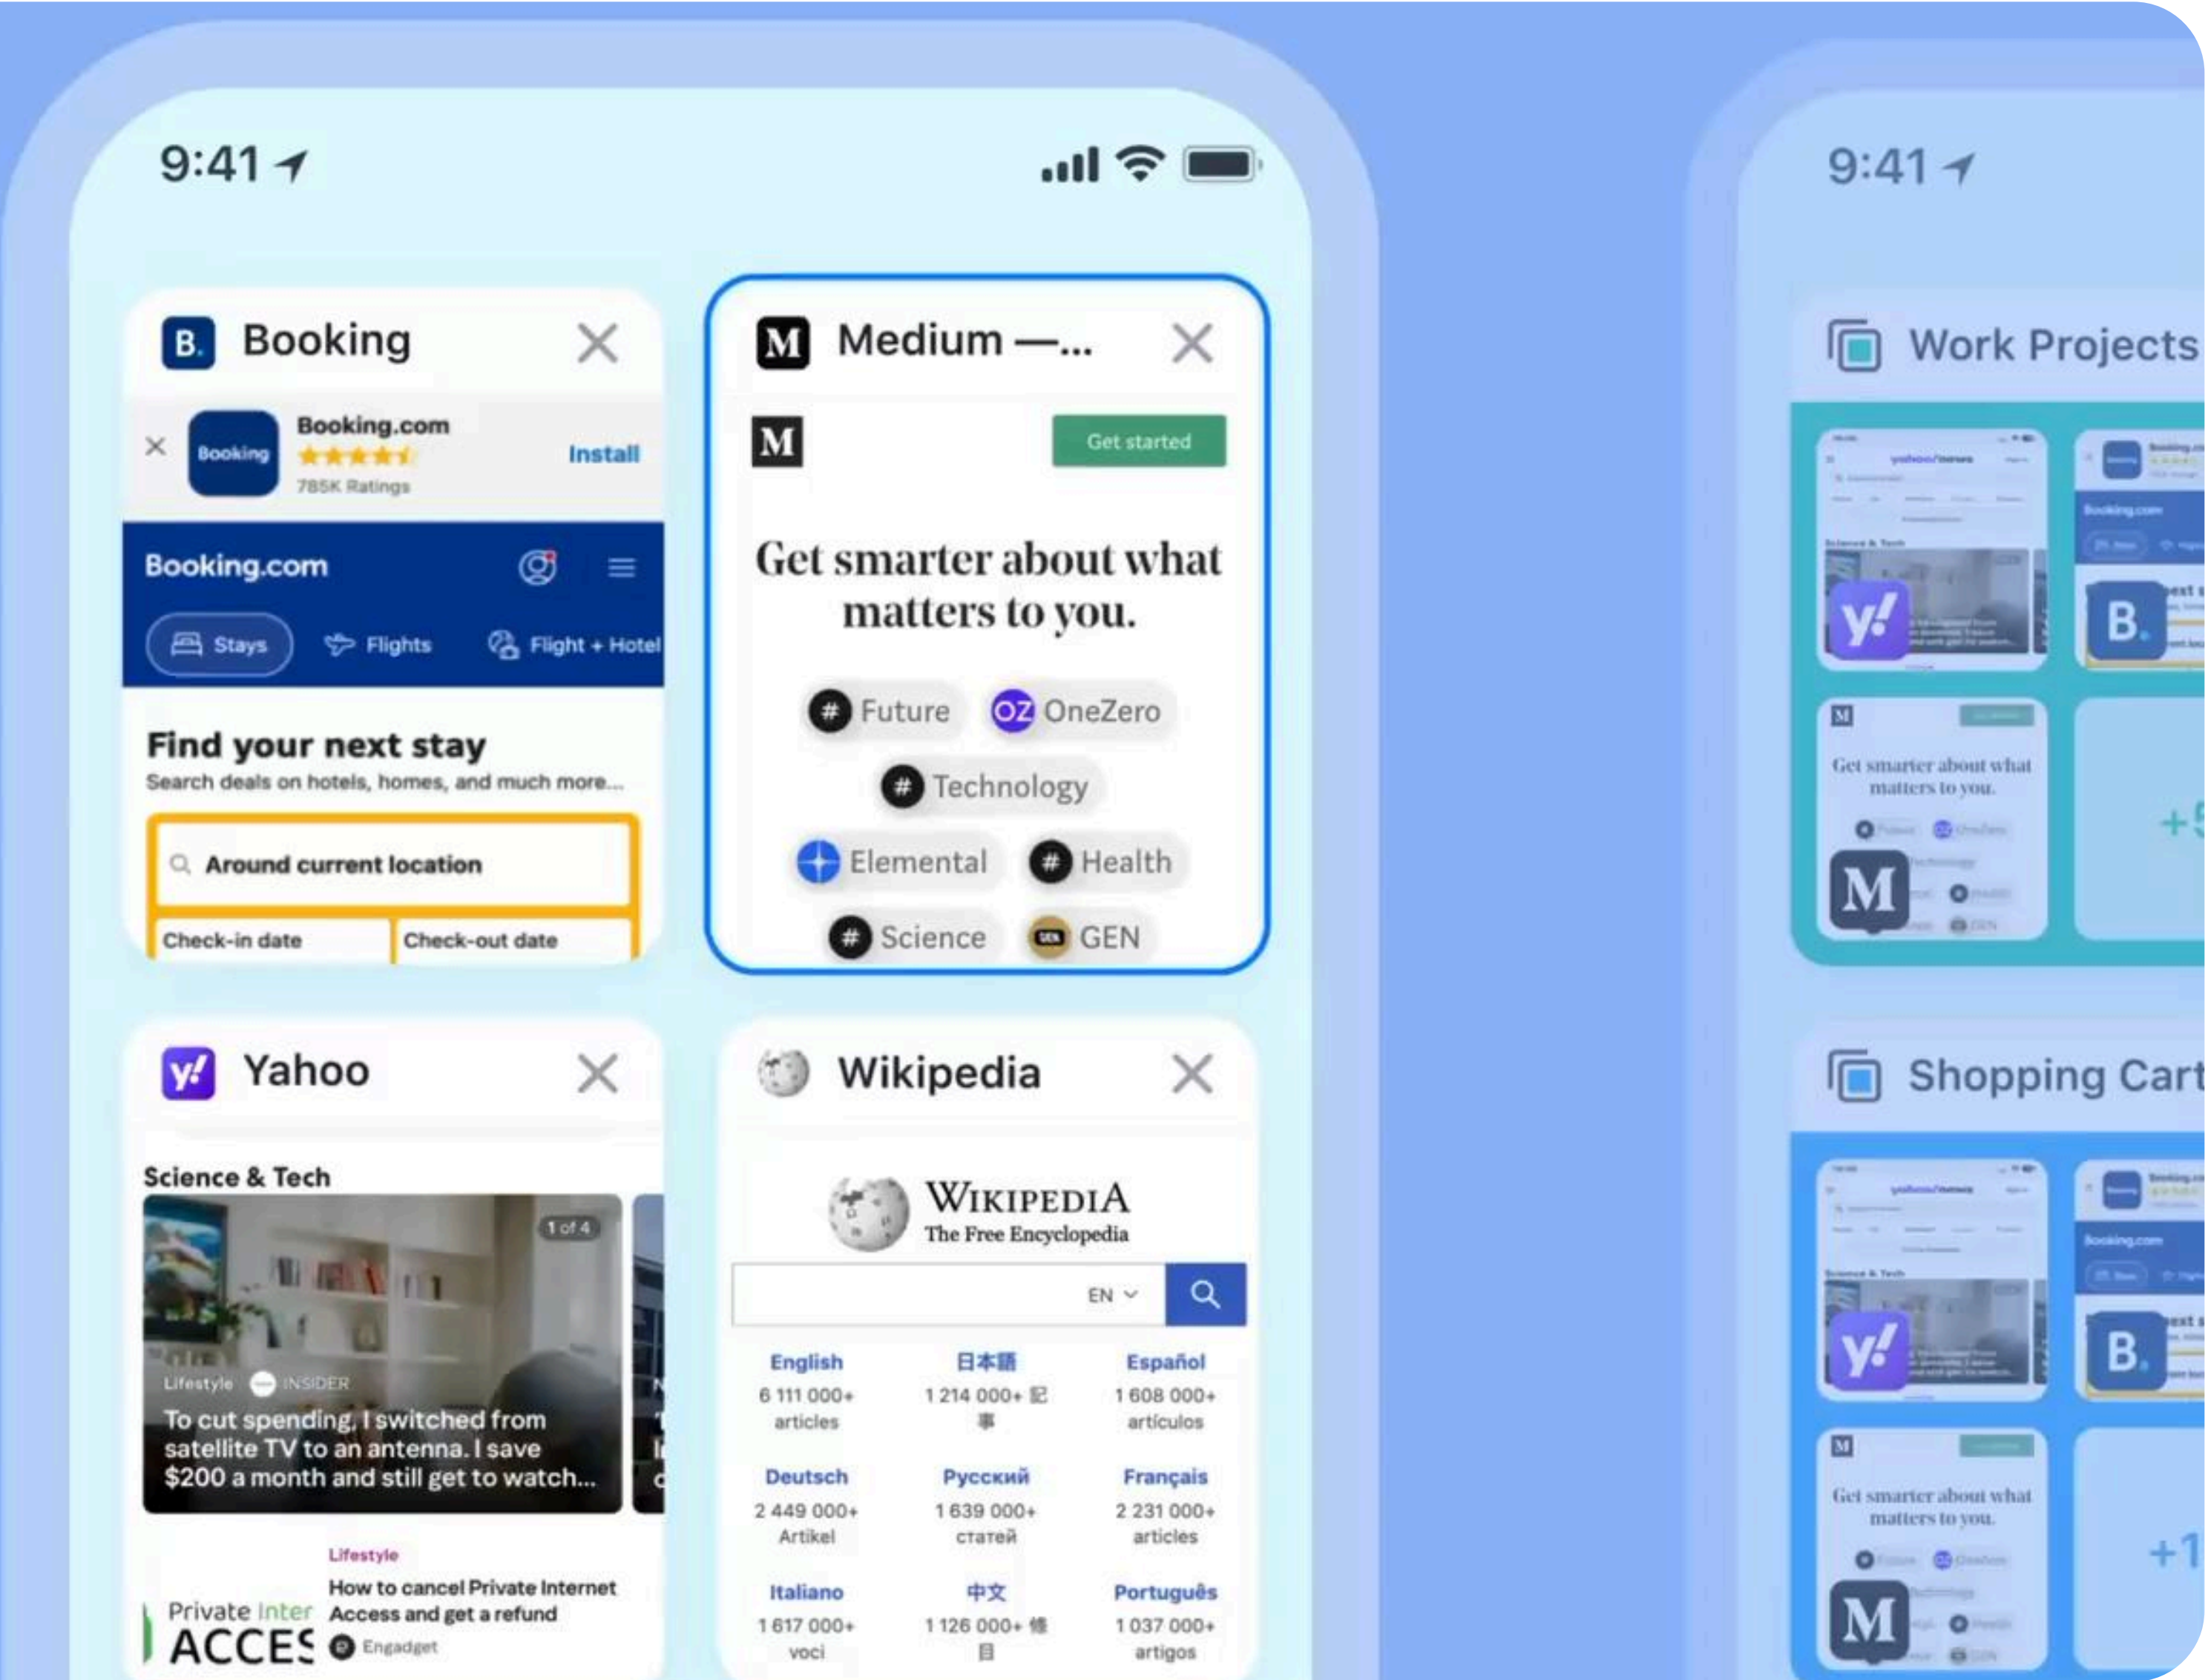

# Solution: Grouping

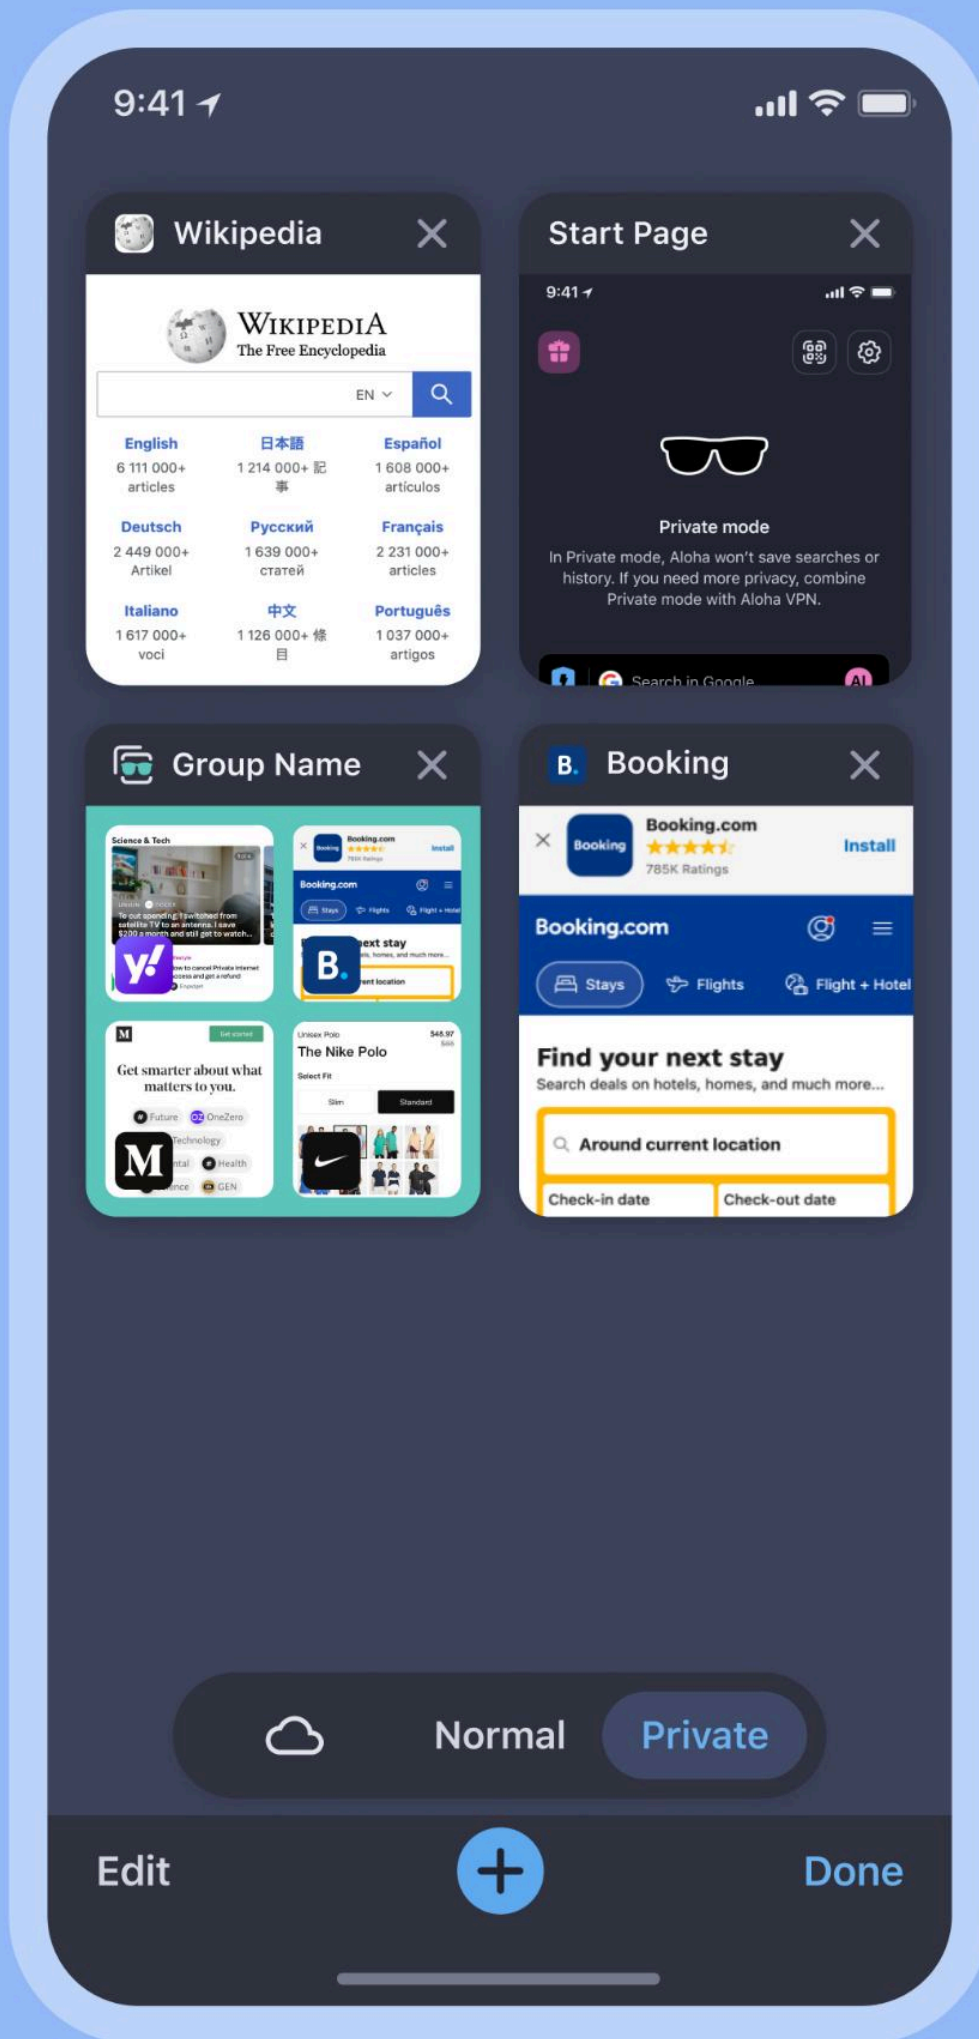

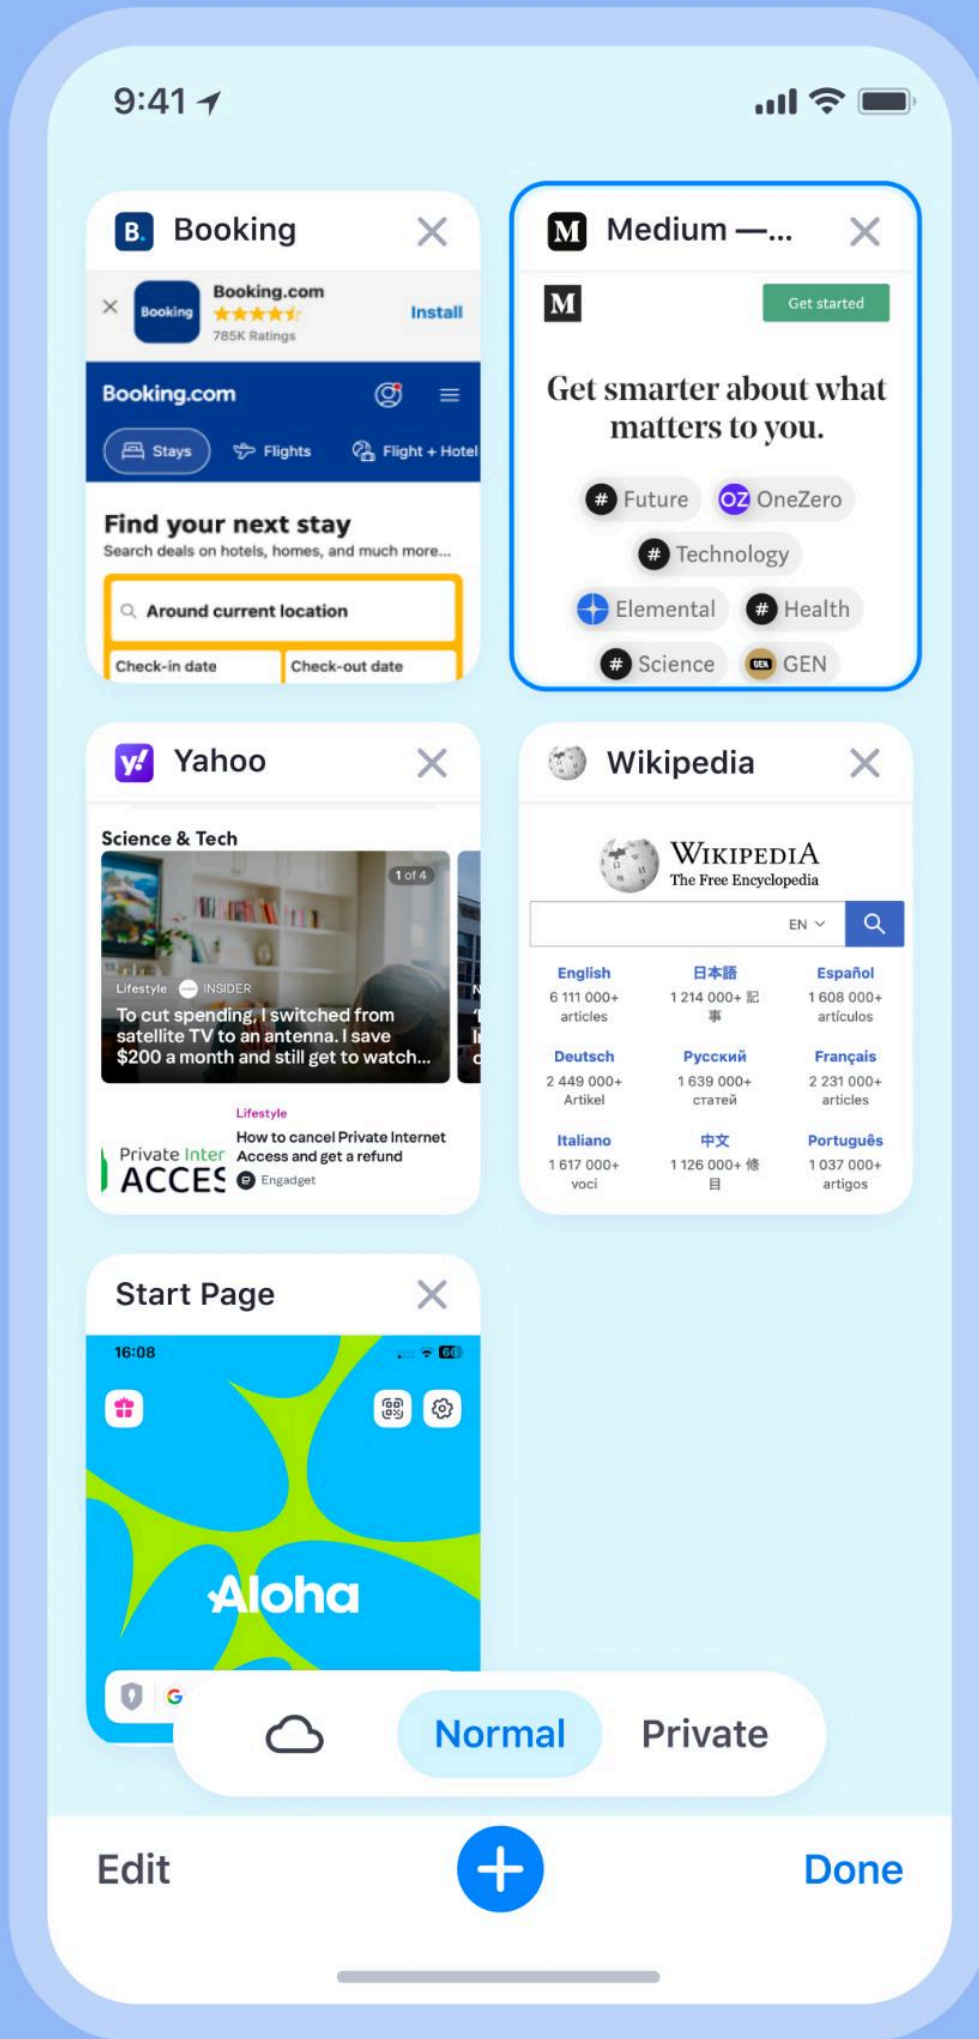

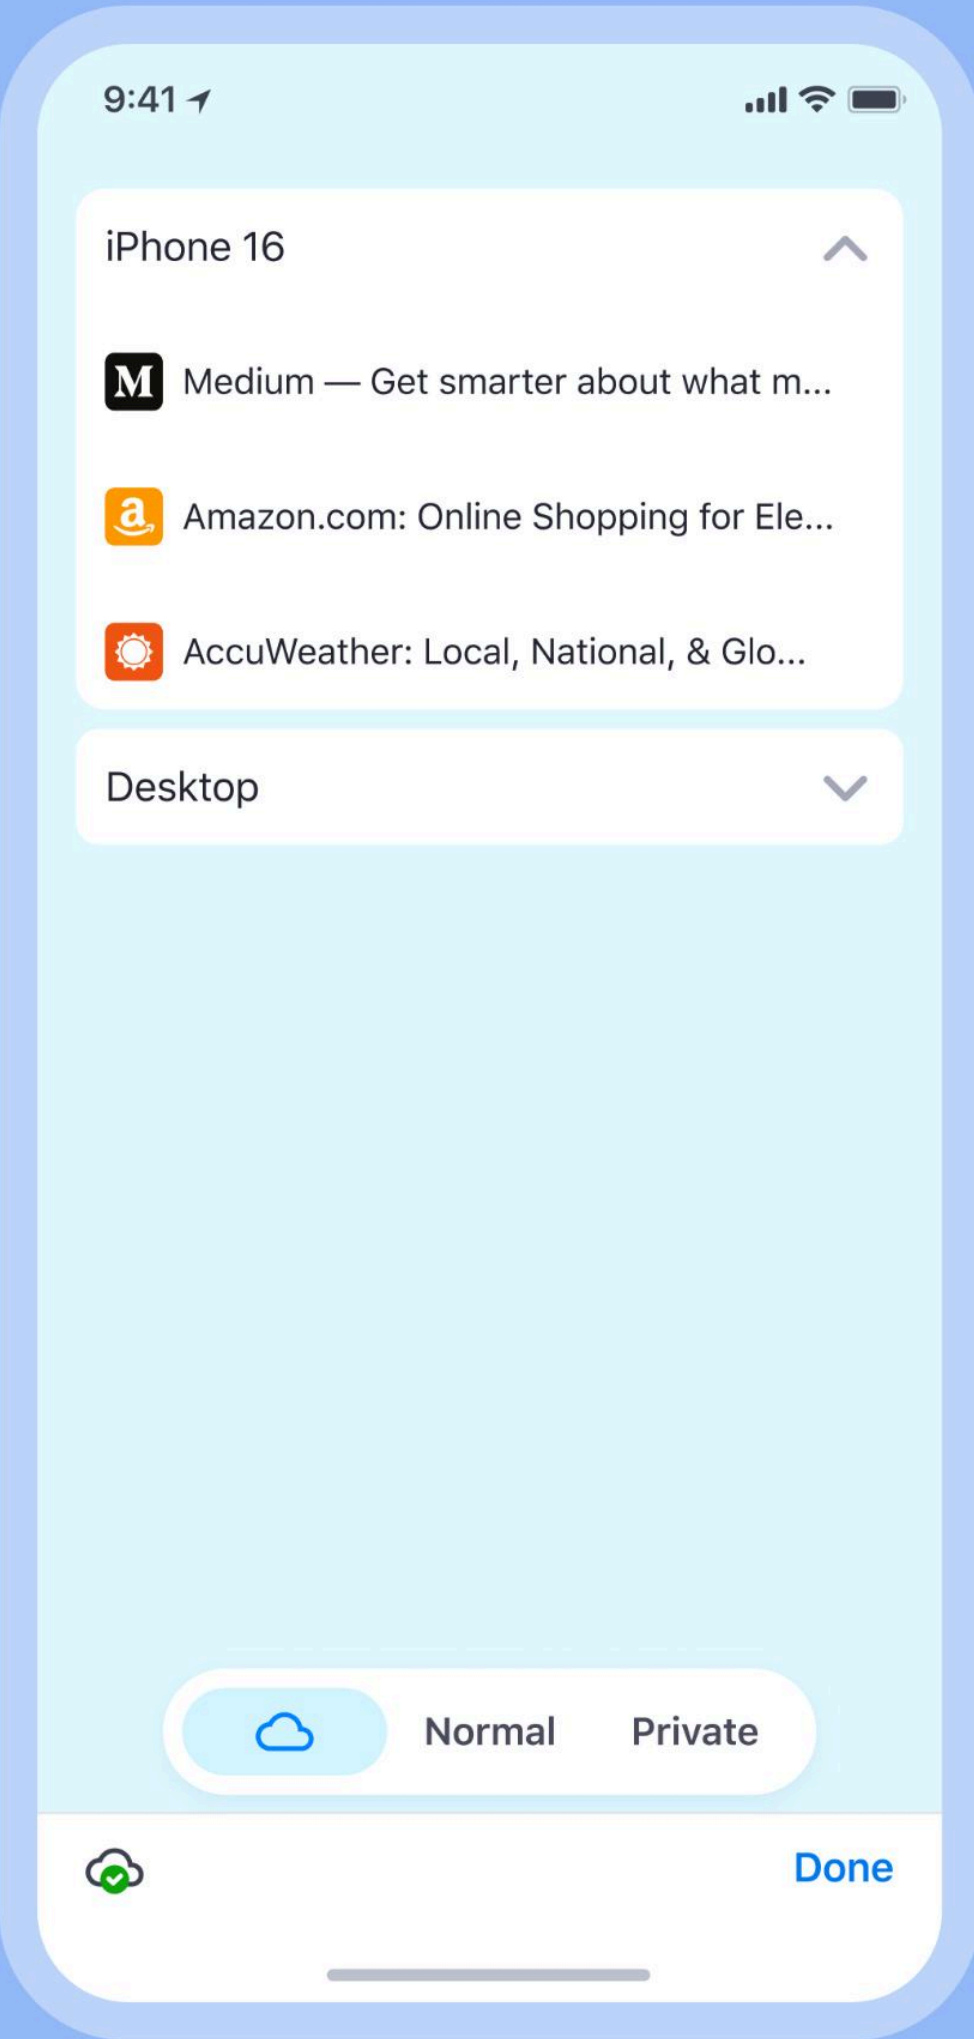

Grouping

Drag and Drop

# Solution: Mode Switcher

Mode switching

Clear mode states

Easily accessible

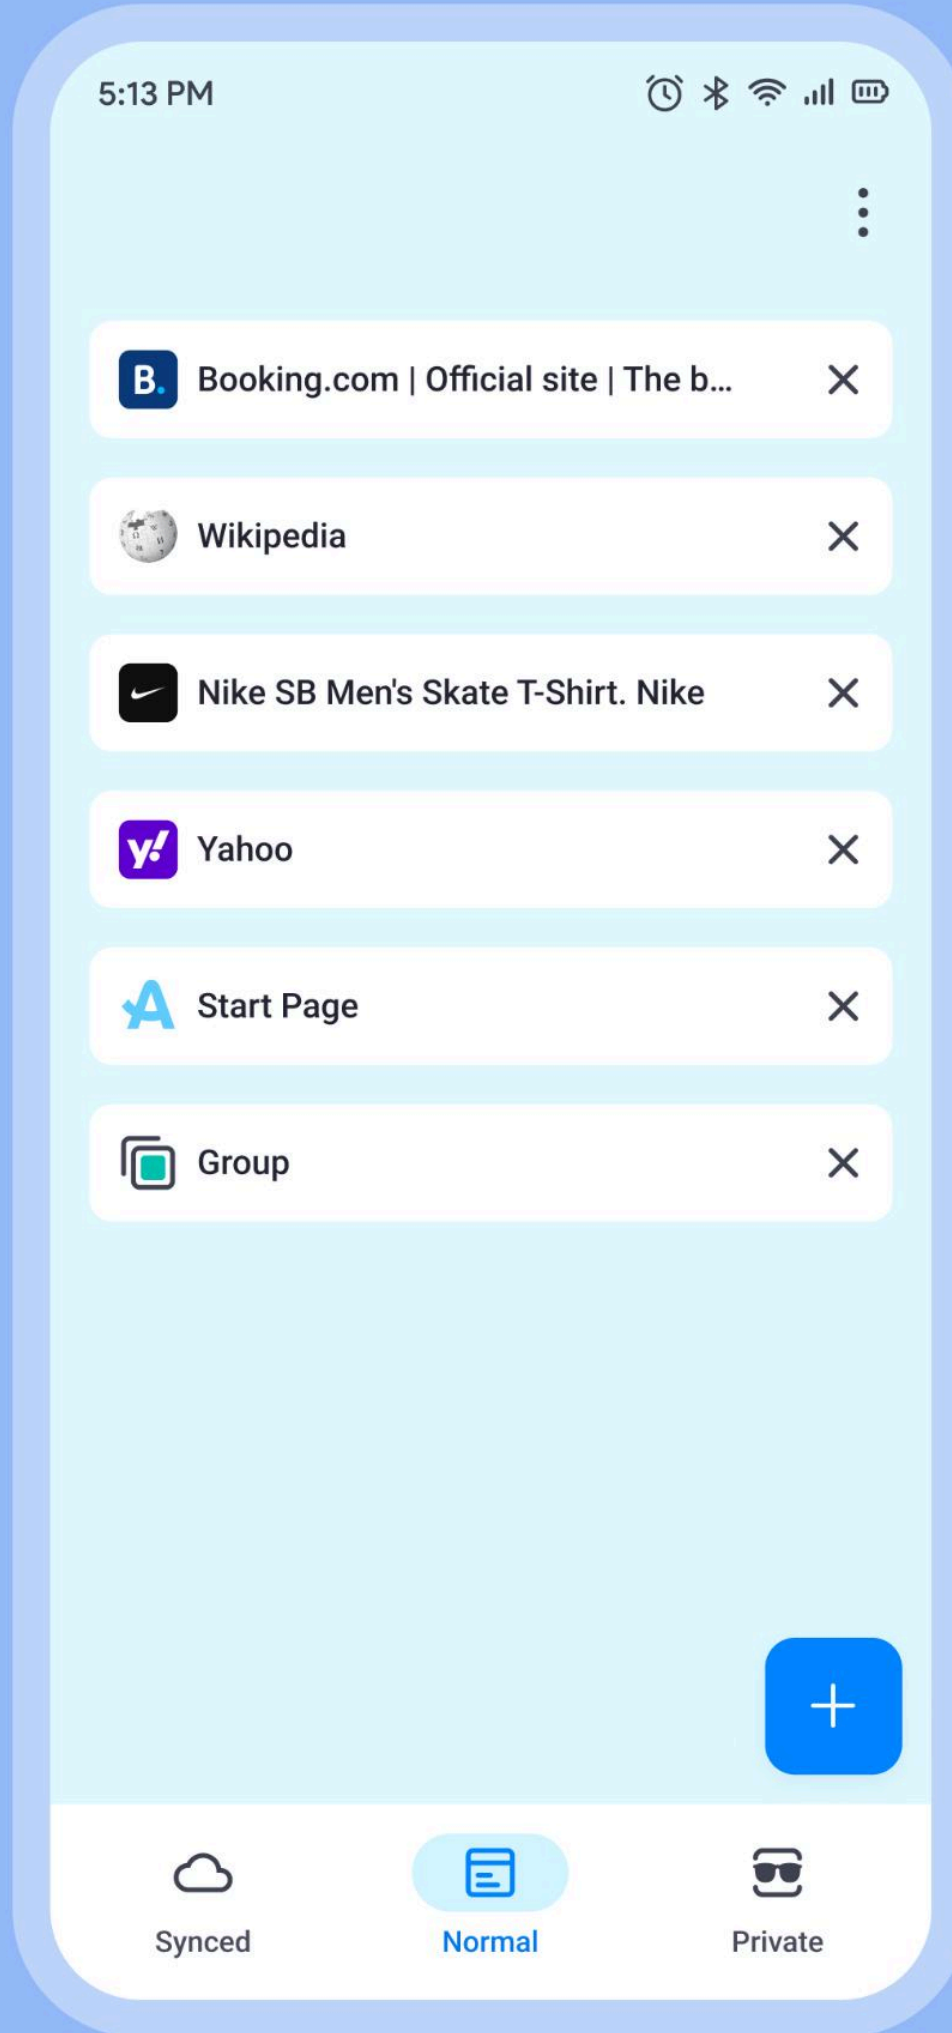

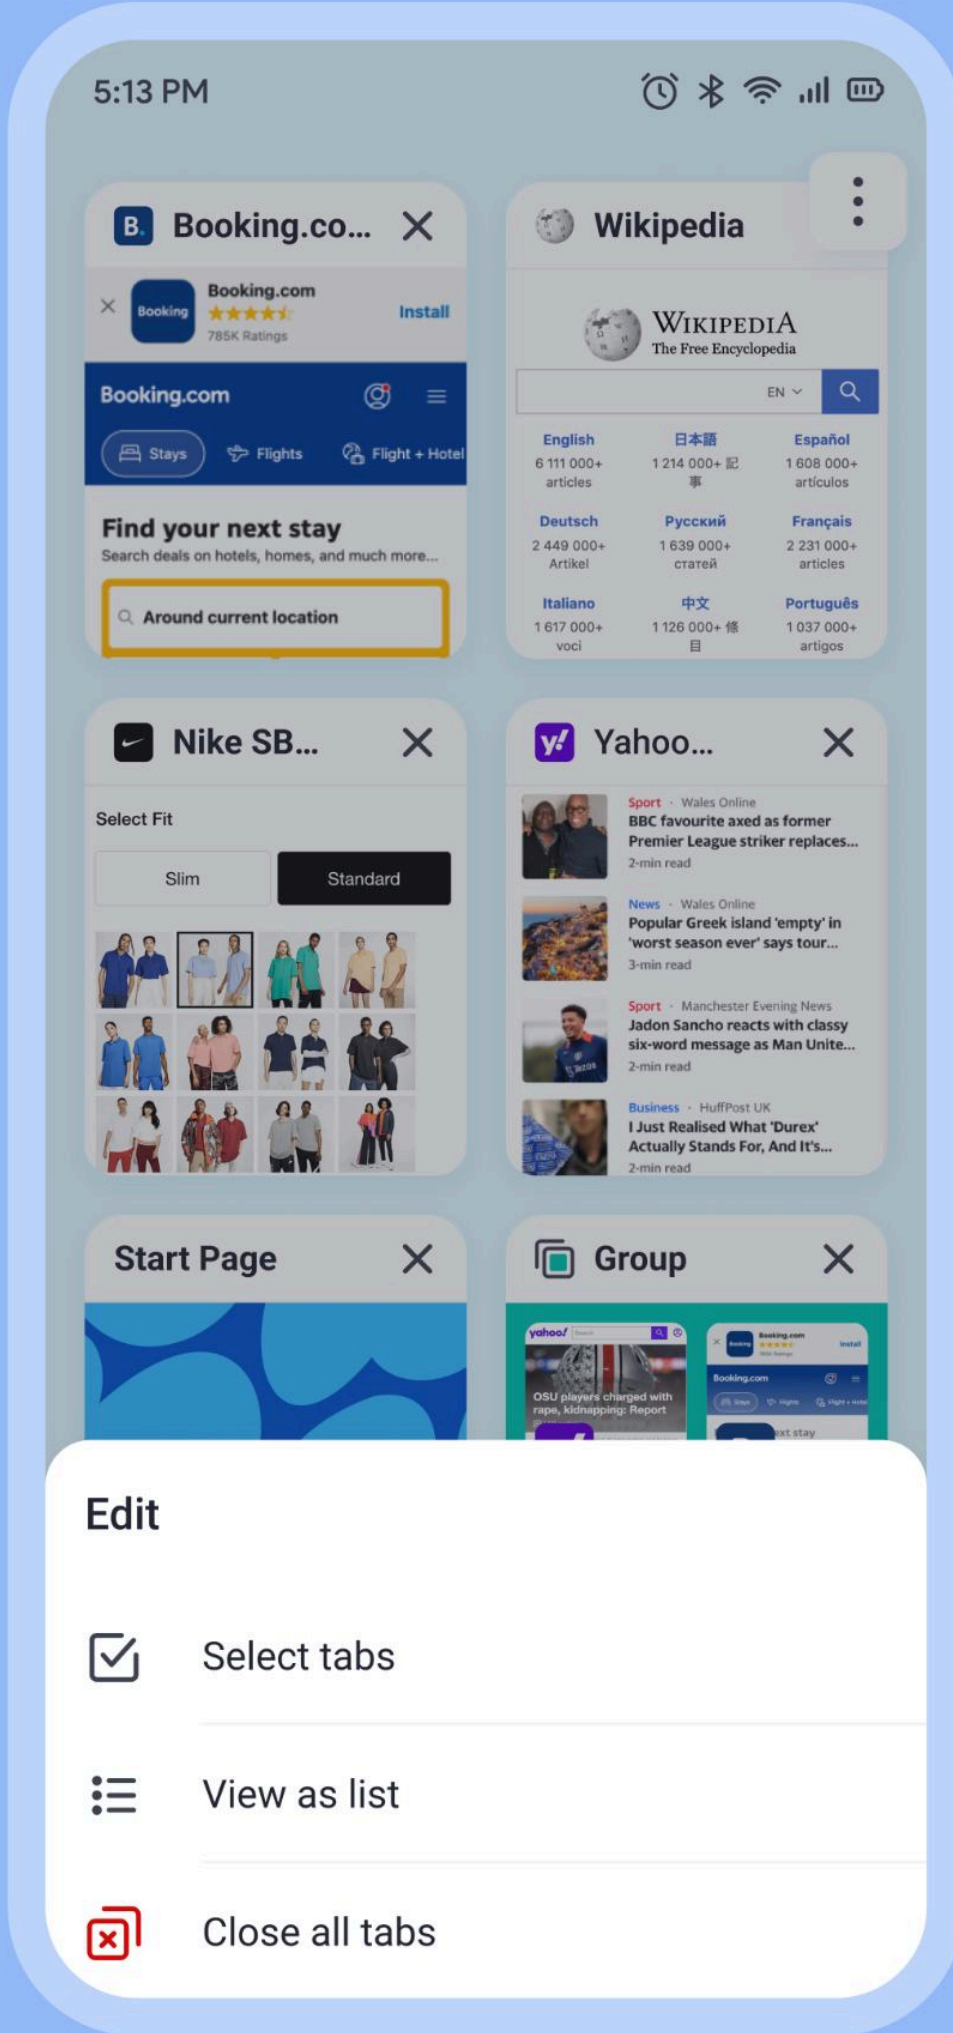

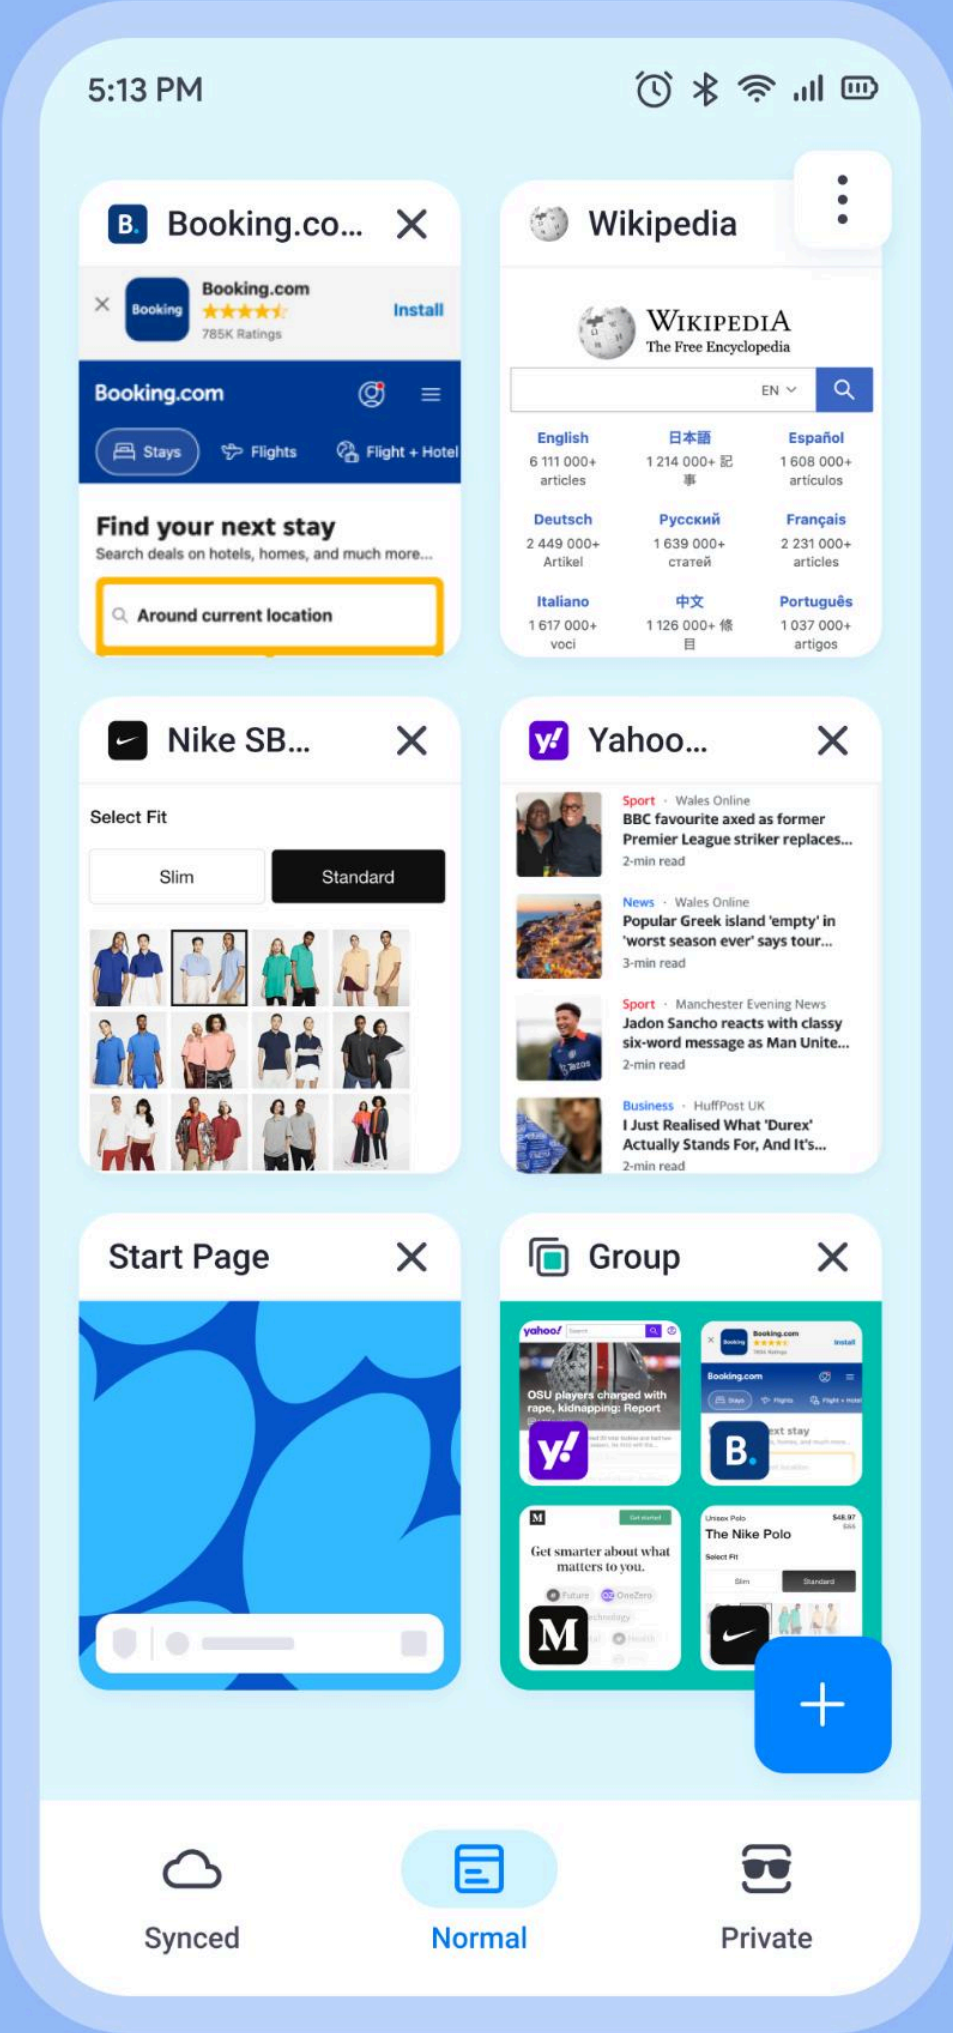

# Solution: Tab Grid

Simplified view

Less memory usage

Easy to navigate

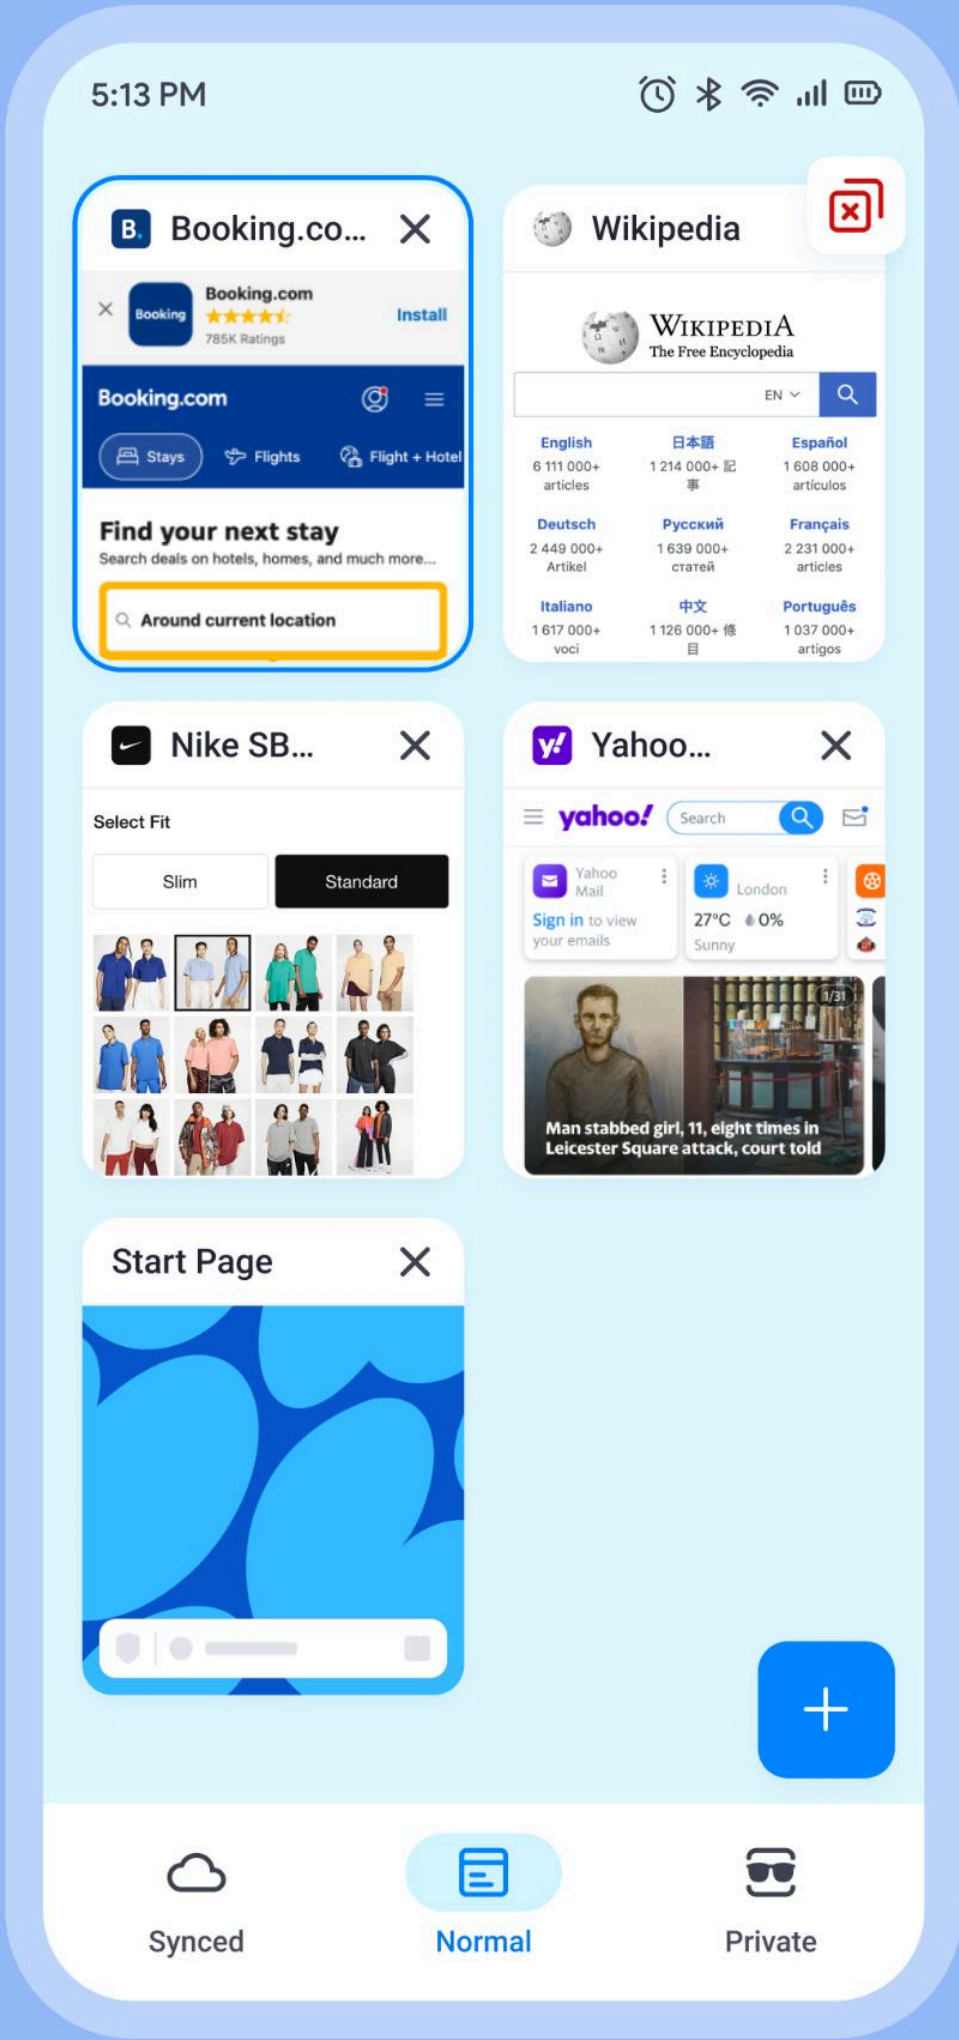

# Solution: What shipped so far

Shipped on Android

Key UI and UX improvements

Updates to Private Mode

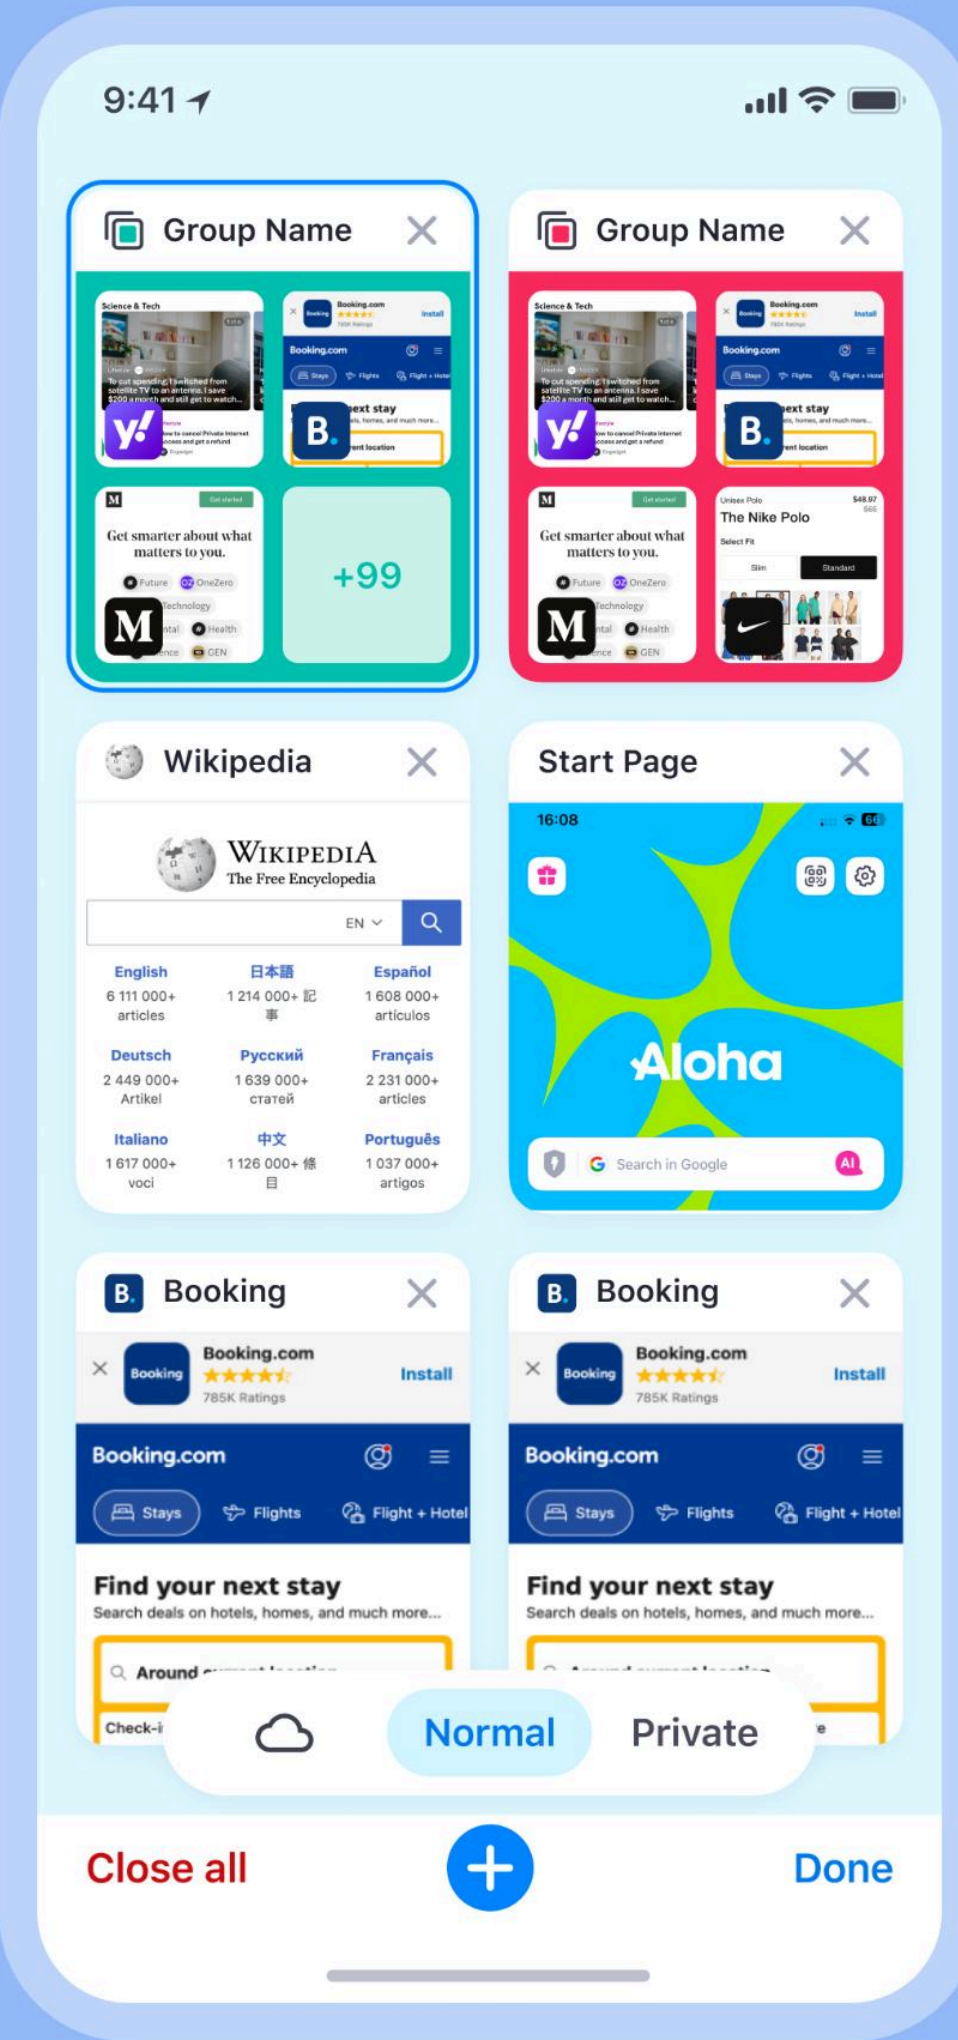

Shipped on iOS

Grouping

UI and UX improvements

New mode switcher

## Impact

1.8% Day 1 retention improvement across iOS and Android (1.2% iOS, 0.6% Android)

Led end-to-end design for 4M+ users. Introduced tab grouping, flexible organization, and platform-specific improvements. Shipped iOS complete in 6 months, Android UI improvements with grouping foundations.

## Key Takeaways

- **Core workflow impact:** Small improvements to daily tasks significantly impact retention
- **Hierarchy over parity:** Visual organisation matters more than feature parity across platforms
- **Cross-platform balance:** Consistency matters but platform-specific strengths matter more
